Cool Surface System
INCLUDED WITH THE G SERIES

Convective heat that rises from the fireplace is captured in the chase and channeled through the vent using the Cool Surface System.

The Cool Surface System channels rising heat behind the wall.

Allows up to 1” thick combustible material (ie: drywall) to be used.

The Cool Surface System and vent bezel are included with every G Series unit.

We understand that surface temperatures are an important factor when considering how a fireplace will affect HDTVs or any framed decorations that might be mounted above. Heat rises naturally and with that in mind, every Enviro G Series Gas Fireplace comes equipped with our exclusive Cool Surface System.

We designed this system to help channel excess rising heat up behind the wall and safely push it through an included vent bezel bypassing any valuables above your G Series fireplace.

Power Vent Kit
OPTIONAL FOR THE G SERIES

- A minimum venting run of 10 feet
- A maximum venting run of 110 feet
- Max of 6 elbows in vent configuration
- Venting can run downward 4’ below the unit
- Flush mount (paintable) termination
- All stoves EXCEPT the G39 require part #50-2321 (Or you can order part #580VA-X46 directly from DuraVent) vent reducer (5 x 8” vent reduced to 4 x 6 5/8” vent)
- Utilizes smaller 4 x 6 5/8” venting
- Run Quiet Fan System (noise reduction)
