## **Revision Summary**

Date: May 28, 2021 - Original Issue

Date: June 30, 2021 – The following revisions were made per request from the EPA:

- -A section was added to the "Settings & Run Notes" table to clarify air damper position for testing, see page 9 of test report. An additional drawing of the corresponding manufacturer's factory set damper position was added to Appendix D of the CBI report.
- -The owner's manuals were edited to reflect the fact that the damper position is factory set and shall be adjusted by a qualified technician only. See page 10 and 21 of Mini-2 and P3-2 owners manuals, respectively (pages 123 and 97 in Non-CBI report).
- -The pre-conditioning test data was revised to include the dates on which conditioning took place, see page 19 of Non-CBI Test Report.

## **Affidavit**

PFS-TECO was contracted by Sherwood Industries Ltd. to provide testing services for the Enviro Mini 2 Pellet-Fired Fireplace Insert per ASTM E2779, *Determining PM Emissions from Pellet Heaters*. All testing and associated procedures were conducted at PFS-TECO's Portland Laboratory on 4/14/2021. PFS-TECO's Portland Laboratory is located at 11785 SE Highway 212 – Suite 305, Clackamas, Oregon 97015. Testing procedures followed ASTM E2779. Particulate sampling was performed per ASTM E2515, *Standard Test Method for Determination of Particulate Matter Emissions Collected by a Dilution Tunnel*.

PFS-TECO is accredited by the U.S. Environmental Protection Agency for the certification and auditing of wood heaters pursuant to subpart AAA of 40 CFR Part 60, New Source Performance Standards for Residential Wood Heaters and subpart QQQQ of 40 CFR Part 60, Standards of Performance for New Hydronic Heaters and Forced Air Furnaces, Methods 28R, 28WHH, 28 WHH-PTS, and all methods listed in Sections 60.534 and 60.5476. PFS-TECO holds EPA Accreditation Certificate Numbers 4 and 4M (mobile). PFS-TECO is accredited by IAS to ISO 17020:2012 "Criteria for Bodies Performing Inspections", and ISO 17025:2005 "Requirements for Testing Laboratories." PFS-TECO is also accredited by Standards Council of Canada to ISO 17065:2012 "Requirements for Bodies Operating Product Certification Systems."

The following people were associated with the testing, analysis and report writing associated with this project.

Aaron Kravitz, Testing Supervisor

## Introduction

Sherwood Industries Ltd. of Victoria, BC contracted with PFS-TECO to perform EPA certification testing on the Enviro Mini 2 Pellet-Fired Room Heater. All testing was performed at PFS-TECO's Portland Laboratory. Testing was performed by Mr. Aaron Kravitz.

#### Notes

- Prior to start of testing, 50 hours of conditioning was performed by the manufacturer at medium burn setting in accordance with ASTM E2779.
- Prior to start of testing, the dilution tunnel was cleaned with a steel brush.
- Front filters were changed on sample train A at one hour after the test began.
- A single, integrated test run, in accordance with ASTM E2779 was performed:
  - 1 Hour at Maximum Burn Setting
  - 2 Hours at Medium Burn Setting (Defined as <50% of Maximum Burn Rate)</li>
  - 3 Hours at Minimum Burn Setting

## **Pellet Heater Identification and Testing**

- Appliance Tested: Enviro Mini 2
- Serial Number: N/A Prototype Unit; PFS Tracking Number 0094
- Manufacturer: Sherwood Industries Ltd.
- Catalyst: No
- Heat exchange blower: Integral
- Type: *Pellet Stove*Style: *Free Standing*
- Date Received: Monday, April 12, 2021
- Testing Period Start: Wednesday, April 14, 2021 Finish: Wednesday, April 14, 2021
- Test Location: PFS-TECO Portland Laboratory, 11785 SE HWY 212 Suite 305, Clackamas, OR 97015
- Elevation: ≈131 Feet above sea level
- Test Technician(s): Aaron Kravitz
- Observers: Mr. Winslow Howe

# **Test Procedures and Equipment**

All Sampling and analytical procedures were performed by Aaron Kravitz. All procedures used are directly from ASTM E2779 and ASTM E2515. See the list below for equipment used. See Appendix C submitted with this report for calibration data. Equipment List:

Equipment ID#	Equipment Description
041	Rice Lake 3'x3' floor scale w/digital weight indicator
053	APEX XC-60 Digital Emissions Sampling Box A
054	APEX XC-60 Digital Emissions Sampling Box B
055	APEX Ambient sampling box
057	California Analytical ZRE CO2/CO/O2 IR ANALYZER
064	Digital Barometer
109A/B	Troemner 100mg/200mg Audit Weights
107	Sartorius Analytical Balance
097	10 lb audit weight
095	Anemometer
111	Microtector
92302052	Gas Analyzer Calibration Span Gas
91005049	Gas Analyzer Calibration Mid Gas

### **Results**

The integrated test run emission rate for test Run 1 was measured to be  $\underline{0.54 \text{ g/hr}}$  with a Higher Heating Values efficiency of  $\underline{80.2\%}$  and a CO emission rate of  $\underline{0.03 \text{ g/min.}}$  The calculated first hour particulate emission rate was  $\underline{1.26 \text{ g/hr.}}$  The Sherwood Industries Ltd. Model Enviro Mini 2 Pellet-Fired Room Heater meets the 2020 PM emission standard of  $\leq 2.0 \text{ g/hr}$  per CFR 40 part 60, §60.532 (b).

Detailed individual run data can be found in Appendix A submitted with this report.

### **Summary Table**

	EPA Application Table																
Run Number	Date	Segme	ents	Run Time (min)	Heat Output (BTU/hr)	1st Hr Emissions (g/hr)	Integrated Total (g/hr)	CO Emissio ns (g/min)	Overall CO Emissi ons	Heating Efficiency (%HHV)	Overall Heating Efficiency (%HHV)						
		Setting	BR					(g/iiiii)	(g/min)		(7011111)						
		Н	1.54	60	23892			0.09		81.0%							
1	4/14/2021	М	0.69	120	10024	1.26	0.54	0.04	0.03	75.6%	80.2%

		OA	0.70	360	10798			0.03		80.2%							

#### Test Run Narrative

#### Run 1

Run 1 was performed on 4/14/2021 as an attempted integrated test run per ASTM E2779. The overall test duration was 360 minutes. The particulate emissions rate for the integrated test run was 0.54 g/hr. The run had an overall HHV efficiency of 80.2%. The train A front filter was changed at 1 hr. All test results were appropriate and valid and the burn rate requirement for the integrated test run were achieved. There were no anomalies and all criteria were met.

## **Test Conditions Summary**

Testing conditions for all runs fell within allowable specifications of ASTM E2779 and ASTM E2515. A summary of facility conditions, fuel burned, and run times is listed below.

Runs	Ambie	ent (°F)	Relative Humidity (%)		Average Preburn Barometric Fuel Pressure Weight		Test Fuel Weight (lbs)	Test Fuel Moisture (%DB)	Test Run Time (Min)
	Pre	Post	Pre	Post	(In. Hg.)	(lbs)	(103)	(7023)	(14111)
1	65	72	23.5	21.7	30.13	3.6	9.8	5.14	360

## **Appliance Operation and Test Settings**

The appliance was operated according to procedures as described in the Operations Manual, found in Appendix B submitted with this report. Detailed run information can be found in Appendix A submitted with this report.

## Settings & Run Notes

Prior to Testing	Excess combustion air slide adjusted per manufacturers' instructions to 0.06" H <sub>2</sub> O in firebox. Final slide position of 0.52" open from fully closed; see Appendix D.					
	Pre-Burn	Test Run				
Run 1	Heat setting 5 (max), Feed trim 5 (max), Combustion trim* 2	High Segment: Heat Setting 5, Feed trim 5, combustion trim 2  Medium Segment: Heat Setting 2, Feed trim 1, Combustion trim 1  Low Segment: Heat Setting 1 (min), Feed trim 1 (min), Combustion trim 1				

<sup>\*</sup>Combustion trim setting does not affect burn rate

## **Appliance Description**

Model(s): Enviro Mini 2

**Additional Models Discussion:** The Mini-2 is available in several other model designations, but these models (the Enviro P3-2 and Regency Greenfire GF40-2) are marketing designations only and are in all respects that may affect emissions performance identical to the tested unit.

**Appliance Type:** Pellet-Fired Heater

**Air Introduction System:** Air enters the burn chamber by being pulled though the firepot, via the exhaust blower, see air flow diagram in Appendix D.

**Combustion Control:** Feed rate is electronically controlled via user-selectable controls.

Baffles: N/A

Flue Outlet: 3-inch exhaust outlet located on the rear of the appliance.

## **Appliance Dimensions**

#### **Enviro Mini 2 Dimensions**

Height	Width	Depth	Firebox Volume	Weight
34"	18"	24"	N/A – Pellet Stove	195 lbs

Appliance design drawings can be found in Appendix D submitted with the CBI copy of this report.

Comments:

Results issued on this report only reflect the analysis of the sample submitted. Our reports and letters are for the exclusive and confidential use of our clients and may not be reproduced, except in their entirety, without the written approval of Twin Ports Testing. Twin Ports Testing Laboratory is accredited to the ISO/IEC 17025:2017 standard by PJLA.

## **Sampling Locations and Descriptions**

Sample ports are located 16.5 feet downstream from any disturbances and 1 foot upstream from any disturbances. Flow rate traverse data was collected 12 feet downstream from any disturbances and 5.5 feet upstream from any disturbances. (See below).

## Sample Points

Project # 21-694 Model: Mini 2

## **Sampling Methods**

ASTM E2515 was used in collecting particulate samples. The dilution tunnel is 6 inches in diameter. All sampling conditions per ASTM E2515 were followed. No alternate procedures were used.

## **Analytical Methods Description**

All sample recovery and analysis procedures followed ASTM E2515 procedures. At the end of each test run, filters, O-Rings and probes were removed from their housings, dessicated for a minimum of 24 hours, and then weighed at 6 hour intervals to a constant weight per ASTM E2515-11 Section 10.

## Calibration, Quality Control and Assurances

Calibration procedures and results were conducted per EPA Method 28R, ASTM E2515-11 and ASTM E2780-10. Test method quality control procedures (leak checks, volume meter checks, stratification checks, proportionality results) followed the procedures outlined.

## **Appliance Sealing and Storage**

Upon completion of testing, the appliance was secured with metal strapping and the seal below was applied, the appliance was then returned to the manufacturer's location at: 6782 Oldfield Rd. Victoria, BC Canada V8M 2A3 for archival.

#### Mini Test Recommendations

#### Set-Up

The unit should be set up with a 6in flue and the air dampener in the rear of the unit set to a position that after running on a setting of 5 heat, 5 Feed Trim and 5 Combustion Trim the Vacuum of the fire box should be .06 in H2O, the CO2 should be around 7.% in the exhaust and an 8' Flue Temp of around 240 degrees Fahrenheit.

#### **Test Settings**

High: 5 Heat, 5 Feed Trim, 2 Combustion Trim

Med: 2 Heat, 2 Feed Trim, 1 Combustion Trim

Low: 1 Heat, 1 Feed Trim, 1 Combustion Trim

# **Minimum Burn Rate Segment Efficiency Results**

Manufacturer: Sherwood

Model: Mini 2 Date: 04/14/21

Run: 1

Control #: 21-694
Test Duration: 180
Output Category: Minimum

#### Test Results in Accordance with CSA B415.1-09

			7
	HHV Basis	LHV Basis	
Overall Efficiency	83.1%	90.6%	
Combustion Efficiency	99.5%	99.5%	
Heat Transfer Efficiency	83.5%	91.1%	
			_
Output Rate (kJ/h)	7,254	6,881	(Btu/h)
Burn Rate (kg/h)	0.43	0.95	(lb/h)
Input (kJ/h)	8,731	8,282	(Btu/h)
Test Load Weight (dry kg)	1.29	2.85	dry lb
MC wet (%)	4.89		
MC dry (%)	5.14		
Particulate (g )	N/A		
CO (g)	2		
Test Duration (h)	3.00		

Emissions	Particulate	CO
g/MJ Output	N/A	0.09
g/kg Dry Fuel	N/A	1.52
g/h	N/A	0.66
g/min	N/A	0.01
lb/MM Btu Output	N/A	0.21

Air/Fuel Ratio (A/F)	36.58

### **Equations and Sample Calculations - ASTM E2779 & E2515**

Client Sherwood

Model: Mini 2

Tracking #: 91

Run: 1

Equations used to calculate the parameters listed below are described in this appendix. Sample calculations are provided for each equation. The raw data and printout results from a sample run are also provided for comparison to the sample calculations.

M<sub>Bdb</sub> – Weight of test fuel burned during test run, dry basis, kg

 $M_{BSidb}$  – Weight of test fuel burned during test run segment i, dry basis, kg

BR - Average dry burn rate over full integrated test run, kg/hr

BR<sub>Si</sub> – Average dry burn rate over test run segment i, kg/hr

V<sub>s</sub> – Average gas velocity in the dilution tunnel, ft/sec

Q<sub>sd</sub> – Average gas flow rate in dilution tunnel, dscf/hr

 $V_{m(\text{std})}$  – Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf

m<sub>n</sub> - Total Particulate Matter Collected, mg

C<sub>s</sub> - Concentration of particulate matter in tunnel gas, dry basis, corrected to STP, g/dscf

E<sub>T</sub> - Total Particulate Emissions, g

PR - Proportional Rate Variation

PM<sub>R</sub> – Average particulate emissions for full integrated test run, g/hr

PM<sub>F</sub> – Average particulate emission factor for full integrated test run, g/dry kg of fuel burned

PFS-TECO Page 1 of 14

### M<sub>Bdb</sub> - Weight of test fuel burned during test run, dry basis, kg

ASTM E2779 equation (1)

$$M_{Bdb} = (M_{Swb} - M_{Ewb})(100/(100 + FM))$$

Where,

FM = average fuel moisture of test fuel, % dry basis

 $M_{Swb}$  = weight of test fuel in hopper at start of test run, wet basis, kg  $M_{Ewb}$  = weight of test fuel in hopper at end of test run, wet basis, kg

### Sample Calculation:

FM = 5.14 %

 $M_{Swb} = 9.8$  lbs

 $M_{Ewb} = 0.0$  lbs

0.4536 = Conversion factor from lbs to kg

$$M_{Bdb} = [(9.8 \times 0.4536) - (0.0 \times 0.4536)] (100/(100 + 5.14))$$

 $M_{Bdb} = 4.21 \text{ kg}$ 

PFS-TECO Page 2 of 14

# $M_{BSidb}$ – Weight of test fuel burned during test run segment i, dry basis, kg ASTM E2779 equation (2)

$$M_{BSidb} = (MS_{Siwb} - M_{ESiwb})(100/(100 + FM))$$

Where,

 $M_{SSiwb}$  = weight of test fuel in hopper at start of test run segment i, wet basis, kg

 $M_{ESiwb}$  = weight of test fuel in hopper at end of test run segment i, wet basis, kg

Sample Calculation (from medium burn rate segment):

 $M_{SSiwb} = 6.2$  lbs

 $M_{ESiwb} = 3.0$  lbs

0.4536 = Conversion factor from lbs to kg

$$M_{BSidb} = [( 6.2 \times 0.4536) - ( 3.0 \times 0.4536)] (100/(100 + 5))$$

 $M_{BSidb}$  = 1.38 kg

PFS-TECO Page 3 of 14

### BR - Average dry burn rate over full integrated test run, kg/hr

ASTM E2779 equation (3)

BR = 
$$\frac{60 \text{ M}_{Bdb}}{\theta}$$

Where,

 $\theta$  = Total length of full integrated test run, min

Sample Calculation:

$$\begin{array}{lll} M_{Bdb} & = & 4.21 & & kg \\ \theta & = & 360 & & min \end{array}$$

BR = 
$$\frac{60 \times 4.21}{360}$$

$$BR = 0.70 kg/hr$$

# BR<sub>Si</sub> – Average dry burn rate over test run segment *i* , kg/hr ASTM E2779 equation (4)

$$BR_{Si} = \frac{60 M_{BSidb}}{\theta_{Si}}$$

Where,

 $\theta_{Si}$  = Total length of test run segment *i*, min

Sample Calculation (from medium burn rate segment):

$$M_{BSidb}$$
 = 1.38 kg  $\theta$  = 120 min

$$\frac{60 \text{ x}}{1.38}$$

$$BR = 0.69 \text{ kg/hr}$$

### V<sub>s</sub> - Average gas velocity in the dilution tunnel, ft/sec

ASTM E2515 equations (9)

$$V_{s} = F_{p} \times K_{p} \times C_{P} \times \left(\sqrt{\Delta P}\right)_{avg} \times \sqrt{\frac{T_{s}}{P_{s} \times M_{s}}}$$

Where:

$$F_p$$
 = Adjustment factor for center of tunnel pitot tube placement,  $F_p$  =  $\frac{V_{strav}}{V_{scent}}$ , ASTM E2515 Equation (1)

v<sub>scent</sub> = Dilution tunnel velocity calculated after the multi-point pitot traverse at the center, ft/sec

v<sub>strav</sub> = Dilution tunnel velocity calculated after the multi-point pitot traverse, ft/sec

 $k_p$  = Pitot tube constant, 85.49

 $C_p$  = Pitot tube coefficient: 0.99, unitless

 $\Delta P^*$  = Velocity pressure in the dilution tunnel, in H<sub>2</sub>O

T<sub>s</sub> = Absolute average gas temperature in the dilution tunnel, °R; (°R = °F + 460)

 $P_s$  = Absolute average gas static pressure in dilution tunnel, =  $P_{bar}$  +  $P_g$ , in Hg

 $P_{bar}$  = Barometric pressure at test site, in. Hg

 $P_g$  = Static pressure of tunnel, in.  $H_20$ ; (in  $Hg = in H_20/13.6$ )

M<sub>s</sub> = \*\*The dilution tunnel wet molecular weight; M<sub>s</sub> = 28.78 assuming a dry weight of 29 lb/lb-mole

#### Sample calculation:

$$Fp = \frac{16.37}{18.26} = 0.896$$

$$V_s = 0.896 \times 85.49 \times 0.99 \times 0.284 \times \left( \frac{76.1 + 460}{30.13 + \frac{-0.18}{13.6}} \right) \times 28.78$$

$$V_s = 16.94 \text{ ft/s}$$

\*The ASTM test standard mistakenly has the square root of the average delta p instead of the average of the square root of delta p. The current EPA Method 2 is also incorrect. This was verified by Mike Toney at EPA.

\*\*The ASTM test standard mistakenly identifies Ms as the dry molecular weight. It should be the wet molecular weight as indicated in EPA Method 2.

PFS-TECO Page 6 of 14

### $\mathbf{Q}_{\mathrm{sd}}$ – Average gas flow rate in dilution tunnel, dscf/hr

ASTM E2515 equation (3)

$$Q_{sd} = 3600 \times (1 - B_{ws}) \times v_s \times A \times \frac{T_{std}}{T_s} \times \frac{P_s}{P_{std}}$$

Where:

3600 = Conversion from seconds to hours (ASTM method uses 60 to convert in minutes)

B<sub>ws</sub> = Water vapor in gas stream, proportion by volume; assume 2%

A = Cross sectional area of dilution tunnel, ft<sup>2</sup>

 $T_{std}$  = Standard absolute temperature, 528  ${}^{\circ}R$ 

 $P_s$  = Absolute average gas static pressure in dilution tunnel, =  $P_{bar} + P_{q}$ , in Hg

T<sub>s</sub> = Absolute average gas temperature in the dilution tunnel, °R; (°R = °F + 460)

P<sub>std</sub> = Standard absolute pressure, 29.92 in Hg

Sample calculation:

Fullation: 
$$Q_{sd} = 3600 \times (1 - 0.02) \times 16.94 \times 0.1963 \times \frac{528}{76.1 + 460} \times \frac{30.13 + \frac{-0.18}{13.6}}{29.92}$$

 $Q_{sd} = 11628.2 \text{ dscf/hr}$ 

PFS-TECO Page 7 of 14

### $V_{m(std)}$ – Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf

ASTM E2515 equation (6)  $V_{m(std)} = K_1 \times V_m \times Y \times \frac{P_{bar} + \left(\frac{\Delta H}{13.6}\right)}{T_m}$ 

Where:

17.64 °R/in. Hg  $K_1$ 

 $V_{m}$ Volume of gas sample measured at the dry gas meter, dcf

Υ Dry gas meter calibration factor, dimensionless

 $\mathsf{P}_{\mathsf{bar}}$ Barometric pressure at the testing site, in. Hg

ΔΗ Average pressure differential across the orifice meter, in. H<sub>2</sub>O

Absolute average dry gas meter temperature, °R  $T_{m}$ 

### Sample Calculation:

Using equation for Train A:

sing equation for Train A:  

$$V_{m(std)} = 17.64 \times 50.718 \times 0.996 \times \frac{2.02}{13.6}$$

$$(30.13 + \frac{2.02}{13.6})$$

$$(91.4 + 460)$$

 $V_{m(std)} =$  **48.920** dscf

Using equation for Train B: 
$$V_{m(std)} = 17.64 \quad x \quad 51.612 \quad x \quad 1.017 \quad x \quad (30.13 + \frac{2.03}{13.6})$$

$$(90.0 + 460)$$

 $V_{m(std)} = 50.966$  dscf

Using equation for ambient train: 
$$V_{m(std)} = 17.64 \quad x \quad 63.62 \quad x \qquad 1 \qquad x \qquad \underbrace{ \left( \begin{array}{c} 30.13 \\ \hline \end{array} \right. + \underbrace{ \begin{array}{c} 0.00 \\ \hline \end{array} \right. }_{13.6} }_{\qquad \qquad (67.7 \ + \ 460 \ )}$$

 $V_{m(std)} = 64.072$  dscf

### m<sub>n</sub> – Total Particulate Matter Collected, mg

ASTM E2515 Equation (12)

$$m_n = m_p + m_f + m_g$$

Where:

 $m_p$  = mass of particulate matter from probe, mg

 $m_f$  = mass of particulate matter from filters, mg

m<sub>g</sub> = mass of particulate matter from filter seals, mg

### Sample Calculation:

Using equation for Train A (first hour):

$$m_n = 0.0 + 0.9 + 0.0$$

$$m_n = 0.9 \text{ mg}$$

Using equation for Train A (remainder):

$$m_n = 0.0 + 1.5 + 0.0$$

$$m_n = 1.5 \text{ mg}$$

Train A Aggregate = 2.4 mg

Using equation for Train B:

$$m_n = 0.0 + 2.2 + 0.0$$

$$m_n = 2.2 \text{ mg}$$

# $C_s$ - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dscf ASTM E2515 equation (13)

$$C_s = K_2 \times \frac{m_n}{V_{m(std)}}$$

Where:

 $K_2$  = Constant, 0.001 g/mg

m<sub>n</sub> = Total mass of particulate matter collected in the sampling train, mg

 $V_{m(std)} \hspace{0.5cm} = \hspace{0.5cm} Volume \ of \ gas \ sampled \ corrected \ to \ dry \ standard \ conditions, \ dscf$ 

Sample calculation:

For Train A:

$$C_s = 0.001 \times \frac{2.4}{48.92}$$

$$C_s = 0.00005$$
 g/dscf

For Train B:

$$C_s = 0.001 \text{ x} \quad \frac{2.2}{50.97}$$

$$C_s = 0.00004$$
 g/dscf

For Ambient Train

$$C_r = 0.001 \text{ x} - \frac{0.0}{64.07}$$

$$C_r = 0.000000 \text{ g/dscf}$$

### E<sub>T</sub> - Total Particulate Emissions, g

ASTM E2515 equation (15)

$$E_T = (c_s - c_r) \times Q_{std} \times \theta$$

Where:

C<sub>s</sub> = Concentration of particulate matter in tunnel gas, g/dscf

C<sub>r</sub> = Concentration particulate matter room air, g/dscf

 $Q_{std}$  = Average dilution tunnel gas flow rate, dscf/hr

 $\theta$  = Total time of test run, minutes

### Sample calculation:

For Train A

$$E_T = ( 0.000049 - 0.000000 ) x 11628.2 x 360 /60$$

 $E_T = 3.42$  g

For Train B

$$E_T = ( 0.000043 - 0.000000 ) x 11628.2 x 360 /60$$

 $E_T = 3.01$  g

Average

$$E = 3.22$$
 g

Total emission values shall not differ by more than 7.5% from the total average emissions

7.5% of the average = 0.24

Train A difference = 0.21

Train B difference = 0.21

PFS-TECO Page 11 of 14

#### **PR - Proportional Rate Variation**

ASTM E2515 equation (16)

$$PR = \left[ \frac{\theta \times V_{mi} \times V_{s} \times T_{m} \times T_{si}}{\theta_{i} \times V_{m} \times V_{si} \times T_{mi} \times T_{s}} \right] \times 100$$

Where:

 $\theta$  = Total sampling time, min

 $\theta_i$  = Length of recording interval, min

 $V_{mi}$  = Volume of gas sample measured by the dry gas meter during the "ith" time interval, dcf

V<sub>m</sub> = Volume of gas sample as measured by dry gas meter, dcf

V<sub>si</sub> = Average gas velocity in the dilution tunnel during the "ith" time interval, ft/sec

 $V_s$  = Average gas velocity in the dilution tunnel, ft/sec

 $T_{mi}$  = Absolute average dry gas meter temperature during the "ith" time interval,  ${}^{\circ}R$ 

T<sub>m</sub> = Absolute average dry gas meter temperature, °R

 $T_{si}$  = Absolute average gas temperature in the dilution tunnel during the "ith" time interval,  ${}^{\circ}R$ 

T<sub>s</sub> = Absolute average gas temperature in the dilution tunnel, <sup>o</sup>R

Sample calculation (for the first 1 minute interval of Train A):

$$PR = \begin{pmatrix} 360 \times 0.122 \times 16.94 \times (91.4 + 460) \times (76.1 + 460) \\ 1 \times 50.718 \times 17.08 \times (76.1 + 460) \times (66.6 + 460) \end{pmatrix} \times 100$$

PFS-TECO Page 12 of 14

# $PM_R$ – Average particulate emissions for full integrated test run, g/hr ASTM E2779 equation (5)

$$PM_R = 60 (E_T/\theta)$$

Where,

 $E_T$  = Total particulate emissions, grams

 $\theta$  = Total length of full integrated test run, min

Sample Calculation:

$$E_T$$
 (Dual train average) = 3.22 g

 $\theta = 360 \text{ min}$ 

$$PM_R = 60 x ( 3.22 / 360 )$$

$$PM_R = 0.54$$
 g/hr

# PM<sub>F</sub> – Average particulate emission factor for full integrated test run, g/dry kg of fuel burned ASTM E2779 equation (6)

$$PM_F = E_T/M_{Bdb}$$

Where,

E<sub>T</sub> = Total particulate emissions, grams

M<sub>Bdb</sub> = Weight of test fuel burned during test run, dry basis, kg

Sample Calculation:

$$E_T$$
 (Dual train average) = 3.22 g

 $M_{Bdb} = 4.21 \text{ kg}$ 

$$PM_F = 3.22 / 4.21$$
)

$$PM_F = 0.76$$
 g/kg

PFS-TECO Page 14 of 14

### GREENFIRE MODEL / MODELE: GF40-2

Listed Room Heater, Pelletized Fuel Type (Appareil de chauffage à granules certifié) Suitable For Mobile Home Installation (Accepté pour l'installation dans une maison mobile, test) Certified to (agréé): ASTM E1509-12. ULC S627-00

Refer to Intertek's Directory of Building Products for detailed information. / Reportez-vous à Intertek's Annuaire des produits du bâtiment pour obtenir des informations détaillées.

This pellet appliance has been tested and listed for use in manufactured homes in accordance with Oregon Administration Rules 814-23-900 through 814-23-909. Install and use only in accordance with the Manufacture's installation and operating instructions. Contact local building or fire officials about restrictions and installation inspection in your area. Do not connect this unit to a chimney flue serving another appliance. See local building codes and manufacturers instructions for precautions required for passing a chimney through a combustible wall or ceiling. Electrical rating: 120 volts, 60 hz, 4.1 Amps. Route cord away from the

Cet appareil de boulette a été teste et repertoirie pour une utilisation dans les maisons pre fabriquées conformément aux reglements l'Administration d'Oregon Gouverne, 814-33-900 à 814-23-909. Installer et ulitiser uniquement conformément aux instructions d'installtion et d'utilisation du fabricant. Contacter les autories locales de la construction ou de la protection incendie pour vous informer sur les restrictions et l'inspection d'installtion dans votre region. Ne branchez pas cette unité sur un conduit de cheminée utilse pour un utre appereil. Consultez les codes de construction locaux et les instructions du fabricant pour les précautions necessaires pur faire passer une cheminée a travers un mur ou un plafold combustible. Le classement électrique : 120 volts, 60 hz, 4.1 Amplis. Maintenez le fil a l'ecart de l'apperreil de chauffage.

For Use With Only Pelletized Wood fuels. Operate only with viewing door and ash removal door closed. Only replace glass with ceramic glass. Components required for installation: a 3 inch (75 mm) or 4inch (100 mm) listed PL vent, complete with components. Hearth mount installations; a listed single wall chimney liner may be used. Inspect and clean Exhaust Venting system frequently.

Pour l'usage avec les combustibles sous forme de boulets uniquement. Fonctionner seulement avec la vue de porte et la porte d'enlèvement de cendre ont fermé. Seulement remplacer le verre avec le verre de ceramique. Les composants ont exigé pour l'installation: 3 pouce (75 mm) ou 4 pouce (100 mm) a énuméré le conduit de PL complète avec les composants. Les installations de mont de foyer ; un paquebot de cheminée de mur de seul énuméré peut être utilisé.

This wood heater needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in the owner's manual. U.S. ENVIRONMENTAL PROTECTION AGENCY Certified to comply with 2020 particulate emission standards. Under specific test conditions this heater has been shown to have a particulate emission level of .54 g/hr. Ce poêle à granulés besoins inspection périodique et la réparation pour un fonctionnement correct. Consultez le manuel d'owner's pour plus d'informations. Il est contre les règlements fédéraux pour exploiter cette pastille chauffe d'une manière incompatible avec les instructions de fonctionnement dans le manuel d'owner's. Ce poêle répond aux normes limites d'émission de l'Environmental Protection Agency des États-Unis 2020. Dans des conditions de test spécifiques, ce poêle a été montré pour avoir un niveau d'émission de particules de .54 g / h.

### DO NOT REMOVE THIS LABEL N'ENLEVEZ PAS CETTE ETIQUETTE

### **IMPORTANT SAFETY DATA:**

Please read this entire Owner's Manual before installing or operating your ENVIRO Pellet Stove. Failure to follow these instructions may result in property damage, bodily injury or even death. Any unauthorized modification of the appliance or use of replacement parts not recommended by the manufacturer is prohibited.

Contact your local building or fire official to obtain a permit and any information on installation restrictions and inspection requirements for your area. All local regulations, including those referring to national and European Standards need to be complied with when installing this appliance.

To prevent the possibility of a fire, ensure that the appliance is properly installed by adhering to the installation instructions. An ENVIRO dealer will be happy to assist you in obtaining information with regards to your local building codes and installation restrictions.

The stove's exhaust system works with negative combustion chamber pressure and a slightly positive chimney pressure. It is very important to ensure that the exhaust system be sealed and airtight. The ash pan and viewing door must be locked securely for proper and safe operation of the pellet stove. Operating with door open could cause a fire inside the house as well as the release of carbon monoxide into the living space.

Carbon monoxide is a colorless and odorless gas, to prevent it from poisoning you or your family know the symptoms of carbon monoxide poisoning: headache, dizziness, weakness, sleepiness, nausea, vomiting, and confusion. Carbon monoxide reduces the blood's ability to carry oxygen. Low blood oxygen levels can result in loss of consciousness and death.

Do not burn with insufficient combustion air. A periodic check is recommended to ensure proper combustion air is admitted to the combustion chamber. Setting the proper combustion air is achieved by adjusting the slider damper located on the left side of the stove.

When installing the stove in a mobile home, it must be electrically grounded to the steel chassis of the home and bolted to the floor. Make sure that the structural integrity of the home is maintained and all construction meets local building codes.

Consider all large air moving devices when installing your unit and provide room air accordingly. NOTE: Extractor fans when operating in the same room or space as the appliance, may cause problems. Limited air for combustion may result in poor performance, smoking and other side effects of poor combustion.

Soot or creosote may accumulate when the stove is operated under incorrect conditions such as an extremely rich burn (black tipped, lazy orange flames).

Be sure to maintain the structural integrity of your home when passing a vent through walls, ceilings, or roofs. It is recommended that the unit be secured into its position in order to avoid any displacement. This appliance must be installed on a floor with an adequate load bearing capacity. If an existing construction doesn't meet these prerequisite, suitable measures (e.g. load distributing plate) shall be taken to achieve it.

FRESH AIR: Outside Fresh Air connection is optional. Fresh Air must be connected to all units installed in Mobile Homes and Air Tight Homes (R2000) or where required by local codes.

If you have any questions with regards to your stove or the above-mentioned information, please feel free to contact your local dealer for further clarification and comments.

# EMISSIONS AND EFFICIENCIES

### **EMISSIONS AND EFFICIENCY - P3:**

This manual describes the installation and operation of the Enviro Mini pellet heater. This heater is U.S. ENVIRONMENTAL PROTECTION AGENCY Certified to comply with 2020 particulate emission standards. Under specific test conditions this heater has been shown to deliver heat at rates ranging from 6,447 - 19,996 Btu/hr.

**Efficiency:** 80.2%\* HHV (PFS TECO 21-694)

\*When using optional top vent adapter kit. (50-4116)

**WARNING:** This pellet heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this pellet heater in a manner inconsistent with operating instructions in this manual.

**WARNING:** This wood pellet has a manufacturer set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this pellet heater in a manner inconsistent with operating instructions in this manual.

### SAFETY WARNINGS AND RECOMMENDATIONS:

**Caution:** Do not connect to any air distribution duct or system. Do not burn garbage or flammable fluids such as gasoline, naphtha or engine oil. Unit hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.

**Warning:** Parts of the appliance, especially the external surfaces, will be hot to touch when in operation and due care will need to be taken. Never place wood, paper, furniture, drapes or other combustible materials within 80cm (31½") of the front of the unit, 20cm (7½") from each side, and 10cm (4") from the back of the unit. Do not let children or pets touch it when it is hot.

To prevent the possibility of a fire, ensure that the appliance is properly installed by adhering to the installation instructions. An ENVIRO dealer will be happy to assist you in obtaining information with regards to your local building codes and installation restrictions.

**FIRE EXTINGUISHER AND SMOKE DETECTION:** All homes with a pellet burning stove should have at least one fire extinguisher in a central location known to all in the household. Smoke detectors and carbon monoxide detectors should be installed and maintained in the room containing the stove. If it sounds the alarm, correct the cause but do not deactivate. You may choose to relocate the smoke detection devise within the room; DO NOT REMOVE THE SMOKE OR CARBON MONOXIDE DETECTORS FROM THE ROOM.

**CHIMNEY OR RUN AWAY FIRE:** Call local fire department (or dial 911). Close the draft fully. Examine the flue pipes, chimney, attic, and roof of the house, to see if any part has become hot enough to catch fire. If necessary, spray with fire extinguisher or water from the garden hose. IMPORTANT: Do not operate the stove again until you are certain the chimney and its lining have not been damaged.

**FUEL**: This pellet stove is designed and approved to only burn wood pellet fuel with up to 3% ash content. Dirty fuel will adversely affect the operation and performance of the unit and may void the warranty. Check with your dealer for fuel recommendations.

### THE USE OF CORD WOOD IS PROHIBITED BY LAW.

**SOOT and FLYASH:** Formation and Need for Removal - The products of combustion will contain small particles of flyash. The flyash will collect in the exhaust venting system and restrict the flow of flue gases. Incomplete combustion, such as occurs during startup, shutdown, or incorrect operation of the room heater will lead to some soot formation which will collect in the exhaust venting system. The exhaust venting system should be inspected at least once every year to determine if cleaning is necessary.

**CREOSOTE:** When wood is slowly burned it produces tar and other organic vapours and these combine with expelled moisture to form creosote. The creosote vapours condense in the relatively cool chimney flue associated with a slow burning fire. As a result, creosote residue accumulates on the flue lining. When ignited this creosote can result in an extremely hot chimney fire.

**CLEANING:** There will be some build up of fly ash and small amounts of creosote in the exhaust. This will vary due to the ash content of the fuel used and the operation of the stove. It is advisable to inspect and clean the exhaust vent semi-annually or every two tons of pellets.

**ASHES:** Disposed ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be on a non-combustible floor on the ground, well away from all combustible materials

pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispensed, they should be retained in the closed container until all cinders have been thoroughly cooled.

**ELECTRICAL:** The use of a surge protected power bar is recommended. The unit must be grounded. The grounded electrical cord should be connected to a standard 110-120 volts, nominal average 2.0 Amps (4.1 Amps peak), 60 hertz electrical outlet and also must be accessible. Ensure the polarity to the outlet the unit will be plugged into is correct as incorrect polarity can affect the unit's operation. If this power cord should become damaged, a replacement power cord must be purchased from the manufacturer or a qualified ENVIRO dealer. Be careful that the electrical cord is not trapped under the appliance and that it is clear of any hot surfaces or sharp edges. This unit's maximum power requirement is 184 watts (600 watts peak).

**GLASS:** Do not abuse the glass by striking or slamming the door. Do not attempt to operate the stove with broken glass. The stove uses ceramic glass. Replacement glass must be purchased from an ENVIRO dealer. Do not attempt to open the door and clean the glass while the unit is in operation or if glass is hot. To clean the glass, use a soft cotton cloth and mild window cleaner, gas or wood stove glass cleaner, or take a damp paper towel and dip into the fly ash. This is a very mild abrasive and will not damage the glass.

**FLAMMABLE LIQUIDS:** Never use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter fluid, or similar liquids to start or "freshen up" a fire in the heater. Keep all such liquids well away from the heater while it is in use.

**SMOKE DETECTOR:** Smoke detectors should be installed and maintained in the structure when installing and operating a pellet burning appliance.

**OPERATION:** The ash pan and door must be closed securely for proper and safe operation of the pellet stove. Also ensure all gaskets on the door are checked and replaced when necessary.

### KEEP ASH PAN FREE OF RAW FUEL.

Do not lace unburned fuel or new fuel in ash pan. A fire in the ash pan may occur.

**INSTALLATION:** Be sure to maintain the structural integrity of your home when passing a vent through walls, ceilings, or roofs. It is recommended that the unit be secured into its position in order to avoid any displacement.

DO NOT INSTALL A FLUE DAMPER IN THE EXHAUST VENTING SYSTEM OF THIS UNIT.

DO NOT CONNECT THIS UNIT TO A CHIMNEY FLUE SERVING ANOTHER APPLIANCE.

**FRESH AIR:** Outside Fresh Air connection is optional. Must be connected to all units installed in Mobile and "Air Tight Homes" (R2000) or where required by local codes. Consider all large air moving devices when installing your unit and provide fresh air accordingly. Limited air for combustion may result in poor performance, smoking and other side effects of poor combustion.

If you have any questions with regards to your stove or the above-mentioned information, please feel free to contact your local dealer for further clarification and comments.

SINCE SHERWOOD INDUSTRIES LTD. HAS NO CONTROL OVER THE INSTALLATION OF YOUR STOVE, SHERWOOD INDUSTRIES LTD. GRANTS NO WARRANTY IMPLIED OR STATED FOR THE INSTALLATION OR MAINTENANCE OF YOUR STOVE. THEREFORE, SHERWOOD INDUSTRIES LTD. ASSUMES NO RESPONSIBILITY FOR ANY CONSEQUENTIAL DAMAGE(S).

# SAVE THIS INSTRUCTION MANUAL FOR FUTURE REFERENCE

### RATING LABEL LOCATION:

The rating label is located on the back of the ash pan access cover.

### Pellet Quality:

Pellet quality is important, please read the following:

Your Enviro pellet stove has been designed to burn wood pellets only. Do not use any other type of fuel, as this will void any warranties stated in this manual.

The performance of your pellet stove is greatly affected by the type and quality of wood pellets being burned. As the heat output of various quality wood pellets differs, so will the performance and heat output of the pellet stove.

**CAUTION:** It is important to select and use only pellets that are dry and free of dirt or any impurities such as high salt content. Dirty fuel will adversely affect the operation and performance of the unit and will void the warranty. Pellet Fuel Industries (P. F. I.) has established standards for wood pellet manufacturers. We recommend the use of pellets that meet or exceed these standards. Ask your dealer for a recommended pellet type.

### P. F. I. PELLET STANDARDS:

Fines (fine particles)	1% maximum through a 1/8" screen
Bulk Density	40 pound per cubic foot minimum
Size	\\\ " to $\frac{5}{16}$ " diameter \\\\ \frac{1}{2} - \frac{1}{2}\$" long maximum
Ash Content	1% maximum (Premium grade)
	3% maximum (Standard grade)
Moisture Content	8% maximum
Heat Content	approximately 8200 BTU per pound minimum

**ASH**: The ash content of the fuel and operation of your stove will directly determine the frequency of cleaning. The use of high ash fuels may result in the stove needing to be cleaned daily. A low ash fuel may allow longer intervals between cleaning.

**CLINKERING:** [clinkers are silica (sand) or other impurities in the fuel that will form a hard mass during the burning process]. This hard mass will block the air flow through the Burn Pot Liner and affect the performance of the stove. Any fuel, even approved types, may tend to clinker. Check the Burn-Pot Liner daily to ensure that the holes are not blocked with clinkers. If they become blocked, remove the liner (when the unit is cold) and clean/scrape the clinkers out. Clean the holes with a small pointed object if required. Refer to the section Routine Cleaning and Maintenance.

**PELLET FEED RATES:** Due to different fuel densities and sizes, pellet feed rates may vary. This may require an adjustment to the slider damper setting or to the auger feed trim setting on low.

Since Sherwood Industries Ltd. has no control over the quality of pellets that you use, we assume no liability for your choice in wood pellets.

Store pellets in a dry area at least 36" (1 m) away from the pellet stove.

### **DECIDING WHERE TO LOCATE YOUR PELLET APPLIANCE:**

- 1. Check the "Clearances to Combustibles" section for proper spacing.
- 2. Do not obtain combustion air from an attic, garage or any unventilated space. Combustion air may be obtained from a ventilated crawlspace.
- 3. Do not install the stove in a bedroom.
- 4. You can vent the stove through an exterior wall behind the unit or connect it to an existing masonry or metal wood stove chimney (must be lined if the chimney is over 6" (15 cm) diameter, or over 28 inches² (180 cm²) cross sectional area). An interior vent can be used with approved pipe passing through the ceiling and roof.
- 5. Locate the stove in a large and open room that is centrally located in the house. This will optimize heat circulation.
- 6. The power cord is 8 feet (2.43 m) long and may require a grounded extension cord to reach the nearest electrical outlet.
- 7. Stove must sit on a non-combustible pad that extends six inches in front of the door or the included hearth pad (50-2929).

### www.nficertified.org

We recommend that our pellet hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Pellet Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

### UNPACKING AND REMOVING PELLET STOVE FROM PALLET

- 1. Start by removing the crating and unit bag, you will need a pry bar and hammer to remove the crating. A sawzall can be used to cut the staples as well.
- 2. Loosen six screws securing Back Grill, once loose slide downwards and remove.
- 3. Use a 5/16" wrench or socket to remove the shipping bolts holding the unit to the pallet.

Figure 1: Shipping Bolt Removal

### **A**SSEMBLY

1. First install the hearth pad if you plan on using it. You may have to unscrew feet to raise unit up. Tilt the unit so it is balancing on the back feet, slide the hearth pad under the unit while making sure the side mounting tabs are on the outside of the base flange. once holes are aligned secure with provided T-20 thread rolling screws. See Figure 2.

Figure 3: Cabinet Side Install

3. Now Install Ash Shelf and Louvers. Ash Shelf is mounted using two T-20 thread roller screws. The Louvers are installed by inserting into slots cut into louver mounting brackets located above the door. If properly aligned the louvers should catch on the bracket tabs and sit at a 15 degree angle.

Figure 2: Hearth Pad Install

2. Next install the Cabinet Sides. There are six screws for mounting each cabinet side. Start by installing screws at front top of the panels, Do not fully tighten screws. Now get the back top screws started. Now install the rest of the screws and tighten them down. See Figure 3.

Figure 4: Louver and Ash Shelf Install

### **CLEARANCES TO COMBUSTIBLES:**

**IMPORTANT:** The P3 must have a Hearth Pad when installing the unit on a combustible floor. The included hearth pad meet all the requirement of a proper hearth pad. If you do not use the included hearth pad a certified non combustible Hearth Pad with a minimum R Value of at least 0.84 must be placed underneath the unit and extend six inches in front of the unit measured from the glass. If the P3 is installed on carpet the use of a solid non combustible Hearth Pad must be used under leveling legs.

These dimensions are minimum clearances but it is recommended that you ensure sufficient room for servicing, routine cleaning and maintenance.

- A. Side wall to unit 8 inches (20 cm)
- B. Back wall to unit 5.5 inches (14 cm)
- C. Back wall to Chimney Connector 4in inches (10cm)
- D. Corner to unit 3 inches (7.5 cm)
- E. Glass to Hearth Pad 6 inches (15 cm)

**Figure 5: Minimum Install Clearances** 

### **ALCOVE CLEARANCES:**

The unit may be installed in an alcove if desired. These minimum clearances to combustibles must be maintained at all times. Be sure to leave room for servicing, routine cleaning, and maintenance. These are inside dimensions.

Minimum Alcove Width 36 inches (91.5 cm)
Minimum Alcove Height 48 inches (122 cm)
Minimum Alcove Depth 30 inches (76 cm)

**Figure 6: Minimum Alcove Clearances** 

### VENT TERMINATION REQUIREMENTS:

### IT IS RECOMMENDED THAT YOUR PELLET STOVE BE INSTALLED BY AN AUTHORIZED DEALER/INSTALLER.

Letter	Minimum Clearance	Description
А	24 in (61 cm)	Above grass, top of plants, wood, or any other combustible materials.
В	48 in (122 cm)	Beside/below any door or window that may be opened. (18" (46 cm) if outside fresh air installed.)
С	12 in (30 cm)	Above any door or window that may be opened. (9" (23 cm) if outside fresh air installed.)
D	24 in (61 cm)	To any adjacent building, fences and protruding parts of the structure.
E	24 in (61 cm)	Below any eave or roof overhang
F	12 in (30 cm)	To outside corner.
G	12 in (30 cm)	To inside corner, combustible wall (vertical and horizontal terminations).
Н	3 ft (91 cm) within a height of 15 ft (4.5 m) above the meter/regulator assembly	To each side of center line extended above natural gas or propane meter/regulator assembly or mechanical vent.
I	3 ft (91 cm)	From any forced air intake of other appliance
J	12 in (30 cm)	Clearance to non-mechanical air supply inlet to building, or the combustion air inlet to any appliance.
K	24 in (61 cm)	Clearance above roof line for vertical terminations.

Table 1: Use in conjunction with Figure 6 for allowable exterior vent termination locations.

1. Do not terminate the vent in any enclosed or semi-enclosed areas such as a carport, garage, attic, crawlspace, narrow walkway, closely fenced area, under a sun deck or porch, or any location that can build up a concentration of fumes such as stairwells, covered breezeway, etc.

7 ft (2.13 m)

Vent surfaces can become hot enough to cause burns if touched by children. Noncombustible shielding or guards may be required.

Clearance above paved sidewalk or paved driveway located on public property.

combustible shielding or guards Figure 7: Use in conjunction with Table 1 for allowable exterior vent termination locations.

- 3. Termination must exhaust above
  - the inlet elevation. It is recommended that at least five feet of vertical pipe be installed outside when the appliance is vented directly through a wall, to create some natural draft to prevent the possibility of smoke or odor during appliance shut down or power failure. This will keep exhaust from causing a nuisance or hazard from exposing people or shrubs to high temperatures. In any case, the safest and preferred venting method is to extend the vent through the roof vertically.
- 4. Distance from the bottom of the termination and grade is 12" (30 cm) minimum. This is conditional upon the plants and nature of grade surface. The exhaust gases are hot enough to ignite grass, plants and shrubs located in the vicinity of termination. The grade surface must not be lawn.
- 5. If the unit is incorrectly vented or the air to fuel mixture is out of balance, a slight discoloration of the exterior of the house might occur. Since these factors are beyond the control of Sherwood Industries Ltd, we grant no guarantee against such incidents.

NOTE: Venting terminals shall not be recessed into walls or siding.

### **OUTSIDE FRESH AIR CONNECTION:**

Outside fresh air is mandatory when installing this unit in airtight homes (R2000) and mobile homes.

A Fresh-air intake is strongly recommended for all installations. Failure to install a fresh air intake may result in improper combustion as well as the unit smoking during power failures.

When connecting to an outside fresh air source, do not use plastic or combustible pipe. A 2" minimum (51 mm) ID (inside diameter) steel, aluminum or copper pipe should be used. It is recommended, when you are installing a fresh air system, to keep the number of bends in the pipe to a minimum.

Figure 8: Outside Air Connection.

### **EXHAUST AND INTAKE LOCATIONS:**

Figure 9: P3 Inlet and Outlet Location.

### **EXHAUST**

Base of unit to center of flue 10.5 in (265 mm)

Center of unit to center of flue 0 in (0 mm)

[at center of unit]

### **FRESH AIR INTAKE**

Base of unit to center of intake 6.625 in (170 mm) Center of unit to center of intake 2.125 in (53 mm)

**IMPORTANT:** When attaching the exhaust venting system to the unit or when joining vent sections three screw must be used at each joint. If vented horizontally, joints shall be made gas tight with aluminum foil duct tape.

### MOBILE HOME INSTALLATION:

- Secure the heater to the floor using the two holes in the pedestal.
- Ensure the unit is electrically grounded to the chassis of your home (permanently).
- Do not install in a room people sleep in.
- Outside fresh air is mandatory. Secure outside air connections directly to fresh air intake pipe and secure with three screws evenly spaced.

CAUTION: THE STRUCTURAL
INTEGRITY OF THE MANUFACTURED
HOME FLOOR, WALL AND CEILING/
ROOF MUST BE MAINTAINED.

Figure 10: Mobile home installation.

### CORNER THROUGH WALL INSTALLATION:

Minimum clearances must be maintained for a corner installation as shown in figure 11.

Figure 11: Corner Installation.

### HORIZONTAL EXHAUST THROUGH WALL INSTALLATION:

### Vent installation: install vent at clearances specified by the vent manufacturer.

A chimney connector shall not pass through an attic or roof space, closet or similar concealed spaces, or a floor, or ceiling. Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365 Installation Code for Solid-Fuel-Burning Appliances and Equipment. Only use venting of L or PL type with an inside diameter of 3 or 4 inches (7.6 or 10.1 cm).

- 1. Choose a location for your stove that meets the requirements stated in this manual and allows installation with the least amount of interference to house framing, plumbing, wiring, etc.
- 2. Install a non-combustible hearth pad (where necessary).
- 3. Place the appliance 15" (37.5 cm) away from the wall. If the stove is to be set on a hearth pad, set the unit on it, and adjust the leveling legs.
- 4. Locate the center of the exhaust pipe on the stove. Extend that line to the wall. Once you have located the center point on the wall, refer to pellet vent manufacturer installation instructions for correct hole size and clearance to combustibles.
- 5. Install the wall thimble as per the instructions written on the thimble. Maintain an effective vapour barrier in accordance with local building codes.
- 6. Install a length of 3" (75 mm) or 4" (100 mm) vent pipe into the wall thimble. The pipe should install easily into the thimble.
- 7. Connect the exhaust vent pipe to the exhaust pipe on the stove. Seal the connection with high temperature silicone.
- 8. Push the stove straight back, leaving a minimum of 5.5" (14cm) clearance from the back of the stove to the wall. Seal the vent pipe to the thimble with high temperature silicone.
- 9. The pipe must extend at least 12" (30 cm) away from the building. If necessary, bring another length of pipe (PL type) to the outside of the home to connect to the first section. Do not forget to place high temperature silicone around the pipe that passes through the thimble.

Figure 12: Straight through wall Installation.

Figure 13: Venting to use with straight through wall Installation.

10. Install a vertical pipe, or if all requirements for direct venting are met, install vent termination. The stainless steel cap termination manufactured by the vent manufacturer is recommended. However, when the vent terminates several feet above ground level and there are no trees, plants, etc. within several feet, a 45° elbow can be used as termination. The elbow must be turned down to prevent rain from entering.

### **NOTE:**

- It is recommended that horizontal through wall installations have 3 to 5 feet (91 to 152 cm) of vertical pipe in the system to help naturally draft the unit in the event of extreme weather or a power outage.
- Some horizontal through wall installations may require a "T" and 3 to 5 feet (91 to 152 cm) of vertical pipe outside the building to help draft the unit. This may be required if a proper burn cannot be maintained, after the stove has been tested and the airflow set. This is due to the back pressure in the exhaust caused by airflow around the structure.
- Follow vent manufacturer guidelines for installation of venting. High temp sealant must be used when connecting vent pipe to the unit's starter pipe. Improper seals at the vent joints may cause combustion by-products to leak into the room where installed **seal as required.**

### THROUGH WALL VERTICAL RISE HORIZONTAL TERMINATION INSTALLATION - FREESTANDING:

A termination cap is always recommended for this type of install but a stainless steel termination hood or a 45° elbow may be used in place of the cap.

Figure 14 is the recommended installation set up, venting length is negligible.

Figure 15 is the installation to use if there is a concrete or retaining wall in line with exhaust vent on a pellet stove. The termination must be 12" (30 cm) from the outside wall and 12" (30 cm) above the ground.

Figure 14: Venting horizontally with rise.

Figure 15: Venting with concrete wall behind unit .

### INSIDE VERTICAL INSTALLATIONS:

Figure 16: Inside Vertical Installation.

- 1. Choose a stove location that is ideal. See the section "Deciding Where to Locate your Pellet Appliance."
- 2. Place a non-combustible hearth pad where necessary.
- 3. Place the unit on the hearth pad (if installed on a combustible surface) and space the unit in a manner so when the pellet vent is installed vertically, it will be 3" (7.5 cm) away from a combustible wall.
- 4. Install the tee with clean out.
- 5. Install the pellet vent upward from there. When you reach the ceiling, make sure that the vent goes through the ceiling fire stop. Maintain a 3" (7.5 cm) distance to combustibles and keep attic insulation away from the vent pipe. Maintain an effective vapor barrier.
- 6. Finally, extend the pellet vent to go through the roof flashing.
- 7. Ensure that the rain cap is approximately 24" (600 mm) above the roof.

### **O**UTSIDE **V**ERTICAL **I**NSTALLATIONS:

To accomplish a outside vertical pipe installation, follow steps 1 through 5 in the "Inside Vertical Installations - Freestanding" section and then finish it by performing the following (refer to Figure 17).

- 1. Install a tee with clean out on the outside of the house.
- 2. Install PL vent upward from the tee. Make sure that you install support brackets to keep the vent straight and secure.
- 3. Install ceiling thimble and secure the flashing as you go through the roof.
- 4. Ensure that the rain cap is approximately 24" (600 mm) above the roof.

Figure 17: Outside Vertical Installation.

### **HEARTH MOUNT INSTALLATION:**

Figure 18: Freestanding hearth mount installation.

Figure 19: Freestanding hearth mount installation overview.

Refer to Figures 18 and 19.

- 1. Install the hearth pad.
- 2. Lock the fireplace damper in the open position.
- 3. Install a positive flue connector at the fireplace dampers or seal the chimney at the top.
- 4. Connect a tee to the exhaust pipe.
- 5. Install flexible stainless steel liner or listed pellet vent to the top of the chimney.

### THERMOSTAT INSTALLATION:

- 1. Install the wall thermostat in a location that is not to close too the unit but will effectively heat the desired area.
- 2. The Right Cabinet Side will need to be removed to access the Control Board. Once the side has been removed you can remove three screws securing the Control Board Cover.

Figure 20: Thermostat wire placement.

3. Now that the board can be accessed, wire the Thermostat using to the Control Board using an 18 gauge, 2 connector wire from the unit to the thermostat.

### TOP VENT ADAPTER KIT

# SPECIFICATIONS

### **DIMENSIONS AND SPECIFICATIONS:**

Weight (with full hopper): 275 lb (125 Kg) Hopper Capacity: up to 62 lb (28 Kg)

Voltage: 110 - 120 V Max Current: 4.1 Amps

Consumption on High: 3.1 lb/hr (1.4 Kg/hr)\*
Consumption on Low: 1.3 lb/hr (0.6 Kg/hr)\*
(Note: Consumption will vary with the type of

fuel used.)

Figure 21: Dimensions of P3.

# OPERATING INSTRUCTIONS

### CONTROL BOARD FUNCTIONS:

- 1. POWER BUTTON: This is the green button with the power symbol, it is used to turn the unit on and off. When the power is on and the blue LED beside the button will be illuminated. The LED will flash during the start-up cycle. Once startup cycle is complete the power LED will stay on.
- **2. AUTO BUTTON:** Located below the Power button, when pressed this activates Auto or "Comfort" mode. LED beside button will be illuminated when active.
- 3. THERMOSTAT BUTTON: Located below the Auto Button. This is for external thermostat control. LED beside button will be illuminated when active.
- 4. ARROW BUTTONS: The Arrow Buttons are used to adjust heat level and trim settings.
- **START-UP:** When the unit is turned on it will go into a start-up cycle while trying to light a fire. During start-up you have no control over the settings. The Power LED will flash until start-up is complete. You can adjust heat levels or toggle the different modes during start-up but these adjustments will not come into affect until the start-up cycle is complete.
- MANUAL MODE: Once the start-up cycle is completed you will be in either Manual mode or Auto mode. When in Manual mode the Power LED is illuminated and AUTO LED is not. Use the Arrow buttons to adjust heat level from L1-L5.
- AUTO MODE: Press the Auto button to activate Auto or "Comfort" mode. When activated the Power and Auto LED's will be illuminated. Use the Arrow buttons to adjust from C1-C9. Each setting corresponds to a different temperature set point. The stove will automatically adjust to hold this temperature. As the room temperature gets close to the set point the fire will decrease in size. If room temperature is above the set point for a certain amount of time the stove will shut down and go into Suspend mode.

Figure 22: Circuit Board **Control Panel Decal.** 

- SUSPEND MODE: Once a stove has gone into Suspend mode the fire will go out. This means the room has heated up beyond the Auto set point. Once temperature in the room drops below the Auto set point the stove start back up and run until the room gets to hot once again. When in suspend mode the Auto LED will flash.
- THERMOSTAT MODE: This can only be used in Manual mode, and is for external thermostat control. A external thermostat can be wiring to the main control board. When activated the LED beside the Thermostat Button will be illuminated.
- FEED/COMBUSTION TRIM: To adjust the Feed Trim you must be in Manual mode heat level 1. Press the hidden button located under the down arrow. The Display will then change from P (Program) to A (Auger) to C (Combustion) with a two second delay between changes. When the display shows an A use the arrows to adjust the feed trim. To adjust the combustion fan trim wait until the display shows C then use the arrows to adjust.
- SERVICE INDICATOR: If you see the "S1" on the LED display this is a maintenance recommended indicator. The "S1" will come on when your stove has run for so many hours. It is recommended that you contact your local dealer for component inspection and servicing. Pellet stoves require regular maintenance to keep running efficiently.

### **AUTOMATIC SAFETY FEATURES OF YOUR PELLET STOVE:**

- A. The stove will shut off if the fire unexpectedly goes out, once exhaust temperature drops below 120°F (49°C), you will see an **E3** code on the LED display.
- B. The stove has a high temperature safety switch. If the temperature on the hopper reaches 200°F (93°C), the auger will automatically stop and the stove will shut down. The LED display will show an E4 error code, see Troubleshooting section. If this happens, call your local dealer to reset the 200°F (93°C) high limit switch. **ALSO** FIND THE REASONS WHY THE UNIT OVERHEATED. This code can also be cause by leaving the hopper lid open, there is a magnetic safety switch.
- C) The unit is equipped with a vacuum switch to monitor the venting pressure; if it becomes blocked the vacuum switch will turn off the auger and there will be an E2 error code on The LED Display. 20

# OPERATING INSTRUCTIONS

### **OPERATING YOUR PELLET STOVE:**

**PRE-BURN INSTRUCTIONS**: The burn pot liner holes must be clear and the liner installed properly against the ignitor tube for proper operation. Check the hopper for enough pellets to start the unit.

### DO NOT OPERATE THE UNIT WITH THE DOOR OR ASH PAN OPEN.

**TO START:** Press the Power button. The stove will turn on. The LED beside the Power button will flash to indicate a start-up cycle. The Heat Level is shown on the LED display, you can change the Heat Level and mode but these adjustments will not take affect until the start-up cycle is complete. If this is the first time the unit has been started or the unit has run out of fuel, the auger will need to be primed. You may need restart the unit if an **E3** error occurs, to do this just press the Power button again. Once you see pellets start to drop the auger is primed.

**TO OPERATE:** When a fire has been established, the Power LED will turn solid (after approximately 10 - 15 minutes) and the current settings will now take affect.

The convection blower (room air blower) will turn on once the start-up cycle is complete. The speed of this blower is automatically controlled and is based off the heat level setting.

### TURNING YOUR PELLET STOVE OFF:

To turn off your Pellet stove just press the Power button. This will not shut off the stove instantly, it will go into a shut down cycle and take approximately 5 minutes for the fire to burn out. The fans will stay running until the unit has cooled sufficiently.

NEVER unplug a unit that is running!

DO NOT unplug unit while Combustion fan is running.

Unplugging may cause smoke to be released into the home.

### **DAMPER SET-UP:**

THE SLIDER / DAMPER HAS BEEN SET AT THE FACTORY. This is used to regulate the airflow through the pellet stove. The slider damper knob is located on the left cab side (see Figure 23).

The slider damper factory setting has been set for peak efficiency operation (see Figure 24).

If the fire should happen to go out and the heat output indicator has been set on the lowest setting, the

Slider Damper may need to be adjusted by a qualified technician only. Contact your local dealer.

For troubleshooting purposes the firebox vacuum pressure may need to be confirmed. This should be done only on a hot stove (operating for thirty (30) minutes or more) by placing a Magnahelic Pressure Gauge in the firebox. The reading can be taken from the  $\frac{1}{8}$ " (3 mm) hole located in the front of the firebox under the door (see Figure 25). **The factory setting should read approximately 0.06 inches of water column on the high fire setting.** 

Figure 23: Slider/Damper Adjustment

# OPERATING INSTRUCTIONS

### **SPECIAL NOTES:**

**Pellet quality** is a major factor in how the Pellet stove will operate. If the pellets have a high moisture content or ash content the fire will be less efficient and has a higher possibility of the fire building up and creating clinkers (hard silica ash build-up).

**Overfiring** should not occur if stove is operating properly, if stove looks like it is buring unusually high turn off the unit with the power button, **DO NOT** unplug. There is a built in safety switch if unit gets too hot from overfiring it will shut down automatically.

Figure 24: Efficient Flame.

Figure 25: Magnehelic Test Hole.

### GUIDELINES FOR FINE-TUNING FOR FUEL QUALITY:

Due to fuel quality the slider damper and control board trims may need to be fine-tuned.

- 1. If the unit has excesses ash build-up in the liner on the lower feed settings, the Combustion Blower Trim should be increased one setting at a time until the problem improves (Factory Setting is #2).
- 2. If the fire is going out on low because the airflow is too great, the Combustion Blower Trim can be lowered to the #1 setting.
- 3. If the stove has excesses ash build-up in the liner on the higher settings the Feed Rate Trim should be trimmed down a setting at a time until the problem improves (Factory setting is #4).
- 4. If you need more heat and the fuel has long pellets, the majority are over 1" (2.5cm) in length, the Feed Rate Trim can be moved up to the #5 setting. NOTE: Only do this if the fuel burns without building up.

The following list of components should be inspected and maintained routinely to ensure that the appliance is operating at its' optimum and giving you excellent heat value:

2-3 Days / Weekly	Semi-annually or 2 Tons of Fuel
Burn Pot and Liner	Exhaust Vent
Heat Exchanger Tubes	Air Intake
Ash Pan	Blower Mechanisms
Door Glass	Heat Exchanger Tubes
Inside Firebox	Behind Firebox Liners & Covers
Ash Pan and Door Gaskets	All Hinges
Door Latch	Post Season Clean-up

### Figure 26: P3 Burn pot and Liner

### **TOOLS REQUIRED TO CLEAN UNIT:**

Torx T-20 Screwdriver, <sup>5</sup>/<sub>16</sub>" wrench or socket, Brush, Soft Cloth, Vacuum with fine filter bag

### **BURNER POT AND LINER** (2-3 days)

Every two to three days (when the unit is cold), remove the burn-pot liner from the stove. Using a metal scraper, remove material that has accumulated or is clogging the liner's holes. Then dispose of the scraped ashes from the liner and from inside the burn-pot. Place the burn-pot back into the stove, making sure that the pipes are properly inserted into the burn pot. Place the liner back into the burn-pot, making sure that the ignitor hole in the liner is aligned with the ignitor tube (shown in Figure 32). Push the liner up against the ignitor tube.

If after long periods of burning, the fire continually builds up and overflows the burn pot or there is a build up of clinkers, this is an indication that the pellet fuel quality is poor, the stove may need cleaning, or the air adjusted. Check the stove for ash build up (clean if required) and adjust the damper to produce the proper clean combustion.

### **HEAT EXCHANGER TUBES** (2-3 days)

A rod is located in the center of the stove just above the door behind the top louvers, see Figure 35. This rod is to be pulled up and down a few times (ONLY WHEN THE UNIT IS COLD) in order to clean away any fly ash that may have collected on the heat exchanger tubes. As different types of pellets produce different amounts of ash, cleaning of the tubes should be done on a regular basis to enable the unit to run efficiently. Do pull on rod excessively if it is not sliding. If stuck inspect rod for bend and try and free up scraper plate from inside firebox.

### **ASH PAN AND DOOR GASKETS** (weekly)

After extended use the gasket may come loose. To repair this, glue the gasket on using high-temperature fiberglass gasket glue available from your local dealer. This is important to maintain an airtight assembly.

### **DOOR GLASS CLEANING (2-3 days)**

Cleaning of the glass must only be done when stove is cold. Open the door. The glass can be cleaned by wiping down the outside and inside of the glass with a soft dry cloth.

If the glass has build up that can not be removed with only the cloth, clean the glass using paper towel and a gas appliance glass cleaner, this may be purchased through most dealers. If a gas appliance glass cleaner is not available, use a damp paper towel dipped in fly ash to clean the glass. After the glass has been cleaned use the dry soft cloth to wiping down the outside and inside of the glass.

### **ASH PAN** (weekly)

This part is located behind the bottom door. To remove the ash pan, open the cover from the right hand side, and lift the ash pan up and out. Dump the ashes into a metal container stored away from combustibles. Monitor the ash level every week. Remember that different pellet fuels will have different ash contents. Ash content is a good indication of fuel efficiency and quality. Refer to "Safety Warnings And Recommendations" for disposal of ashes. Vacuum the inside of the ash pan compartment inside the pedestal including the hole at the top back of the compartment. Replace the ash pan ,close the latch, and close pedestal door. **DO NOT PLACE UNBURNED OR RAW PELLET FUEL IN ASH PAN.** 

Figure 27: P3 Open

### **AIR INTAKE** (semi-annually)

Inspect periodically to be sure that it is not clogged with any foreign materials.

# **EXHAUST PASSAGES** (Semi-annually) To prevent build up of fly-ash all the exhaust passages must be cleaned and vacuumed.

### Clean behind clean-out covers:

- Open ash box cover.
- Remove ash box.
- Using a <sup>5</sup>/<sub>16</sub>" socket, loosen the six screws in the ash box compartment; four on the back.
- Rotate the back cover counter clockwise.

Figure 27: P3 Clean-Out Covers.

- To remove and rotate the side covers to open them.
- Vacuum out all three 3 chambers.
- Close all the clean-out covers and tighten the screws.

### **HEAT EXCHANGER TUBES** (2-3 days)

- The heat exchanger tubes are located behind the Louver assembly. To access Heat Exchanger Scraper Rod, remove middle two louvers by tipping up and pulling out.
- Pull out the Scraper Rod shown in Figure 35 in order to remove any fly ash that may have collected on the heat exchanger tubes. This will allow for optimal heat transfer to convection air.

### **REMOVAL OF FIREBOX PANELS**

- Open the door, remove the door, burn pot and burn pot liner.
- Lubricate all screws with penetrating oil
- Remove the four screws that hold the side panels in place.
- With the tip of a flat screwdriver, gently lift up the side panels and remove the side panels.
- Pull the center panel out.
- Vacuum thoroughly.
- Re-install panel by inserting center panel.
- Place the side panels back into the firebox locking them into place and re-install the two screws on each side.
- Clean thoroughly.

Note: Screws that secure left side panel also secure hinge bracket which holds cast door. Remove door before unscrewing.

Figure 29: P3 Heat Exchanger Tubes

Figure 30: P3 Firebox Panels

### FIREBOX (weekly)

The paint on the steel firebox panels may peel. This is due to extreme conditions applied to the paint and is in no way covered by warranty. Brush and vacuum up all soot and flyash from firebox.

### **AIR WASH** (semi-annually)

Vacuum out the air wash passages at the top of the glass (see Figure 33). We recommend that a soft brush nozzle head is used on the vacuum.

### **EXHAUST VENT** (semi-annually)

This vent should cleaned every year or after two tons of pellets. We recommend contacting your dealer for professional cleaning. To clean the vent pipe, tap lightly on the pipe to dislodge any loose ash. Open the bottom of the "T" to dump the ash, then vacuum as much of the ash out of the vent pipe as possible. Failure to clean exhaust venting can result in a serious creosote fire.

### **BLOWER MECHANISMS** (semi-annually)

Unplug the stove then open the right and left side panels to access the two blowers. Vacuum all dust from motors. DO NOT lubricate the motors. Check gaskets and replace if needed.

### **HINGES**

Check to make sure all hinges are working properly. You may use high temp anti-sieze on door hinges for smoother operation.

### **POST SEASON CLEAN-UP**

Once you are finished using the pellet appliance for the season, unplug the stove for added electrical protection. It is very important that the stove be thoroughly cleaned and serviced. Pellet should be regularly service for optimum efficiency and prolonged life.

### DOOR GLASS REPLACEMENT

Never run a stove with broken glass, new glass must be purchased and installed by a Enviro dealer. The door glass is made of high temperature "PYROCERAM" ceramic glass. The proper glass size is  $13'' \times 9.5'' \times 0.2''$  (5mm). To replace the glass, unscrew and remove the seven retainer screws. Carefully remove the glass and any broken pieces using protective gloves. High temperature fiberglass tape should be used around the glass on the sides and bottom. Place glass with fiberglass tape around outside into cast door, there should be no gasket at the top. Use the same retainers to secure the glass in place, make sure glass is properly seated in the cast door before tightening screws. Do not strike or slam door shut this can cause glass to break. The use of substitute glass materials is prohibited use only part 50-2942.

### How can I reduce the visible emissions?

If all of the steps for cleaning and operating are followed, there should be no visible emissions.

# TROUBLESHOOTING

### DO NOT:

- Service the stove with wet hands. The stove is an electrical appliance, which may pose a shock hazard if handled improperly. Only qualified technicians should deal with possible internal electrical failures.
- Do not remove any screws from the firebox without penetrating oil lubrication.

### WHAT TO DO IF:

- 1. The stove will not start.
- 2. E2 on LED Display.
- 3. E3 on LED Display.
- 4. E4 on LED Display.
- 5. The Exhaust Blower will not function normally.
- 6. The Auger is not feeding pellets.
- 7. The Convection Blower will not function normally.
- 8. The Igniter not working.
- 9. Control settings (Heat Level) has no effect on the fire.

### \*NOTE: All troubleshooting procedures should be carried out by qualified technicians or installers.

### 1. The stove will not start.

- Make sure the stove is plugged in and the wall outlet is supplying 115-120V AC power.
- If the Control Board has been is set to Thermostat mode, turn the thermostat up to call for heat.
- Check the LED display for error codes. If Display reads **E2,E3**, or **E4** use Troubleshoot sections.
- Check the fuses on the circuit board.
- If the unit still does not start, contact your local service dealer for service.

### 2. E2 on LED Display (The Vacuum Switch contacts have opened for more than 1:00 min)

- Pinch, break or blockage in Vacuum Hose Check hose for pinch points or damage, replace or re-route as required. Blow out Vacuum Hose with compressed air.
- Blocked Hose Barb on Exhaust Channel Use a paper clip to clean out Hose Barb or remove the Vacuum Hose from the Vacuum Switch and blow into the hose to remove blockage.
- Blocked exhaust / venting system Have stove and venting cleaned and inspected.
- Air Damper is closed or set to low open damper slightly.
- Severe negative pressure in area where unit is installed Check the operation by opening a window, does this solve the problem? If it does, install fresh air intake to unit or room. Venting system may require vertical section to move termination into a low pressure zone.
- Vacuum Switch failure Bypass the vacuum switch, if this corrects the problem check for above problems before replacing the Vacuum Switch.
- Damage to gray wires between Circuit Board and Vacuum Switch Inspect wires and connectors
- Combustion Blower failure If the Combustion Blower is not turning fast enough to generate the proper vacuum in the Exhaust Channel. Visually Check if the blower motor is turning, check the Exhaust Blower voltage across the blower wires (>=115V on #5 setting and >= 82V on #1 setting). Replace the Circuit Board if the Voltage reading is less than 82 V. with a line voltage >115 V AC.
- Check Vacuum levels in the exhaust channel by bypassing the vacuum switch, then remove the Vacuum hose from Vacuum Switch. Check exhaust vacuum readings by placing the open end of the Vacuum Hose on a Magnehelic Gauge. (readings must be above .09" WC on low fire).
- If the motor fails to reach a 0.09" WC readings, then replace the Combustion Blower

### To reset Circuit Board after a trouble code - press Power button.

# TROUBLESHOOTING

### 3. E3 on LED Display (Proof of Fire Failure)

- If a fire is not detected, or if the fire has gone out the display will read E3 because the exhaust temperature is too low causing Exhaust Temperature Sensor's contacts to open.
- Check the hopper for fuel. Auger may need to be primed if stove has run out of pellet or being fired for the first time.
- Incorrect air damper setting. Excessive air may consume the fire too quickly before the next drop of fuel, leaving completely unburned fuel in the burn pot liner. Insufficient air will cause build up, further restricting the air flow through the Burn Pot Liner. This in turn will cause the fuel to burn cold and very slowly. Fuel may build up and smother the fire. In this case clean the burn pot. (NOTE: unit may require a changes to the vent system or installation of fresh air intake to correct Air to Fuel ratio problems).
- Combustion Blower failure. The Combustion Blower is not turning fast enough to generate the proper vacuum in the fire box. Visual Check is the blower motor turning.
- Check the Exhaust Blower voltage across the blower wires (>=114V on #5 setting and >= 82V on #1 setting).
   Replace the Circuit Board if the Voltage reading is less than 82 V. with a line voltage >114 V AC.
- Check Vacuum levels in the exhaust channel by bypassing the Vacuum Switch, then remove the Vacuum hose from Vacuum Switch. Check exhaust vacuum readings by placing the open end of the Vacuum Hose on a Magnehelic Gauge (readings must be above .10" WC on low fire).
- Poor Quality Fuel Insufficient energy in the fuel to produce enough heat to keep the stove burning or operational.
- Exhaust Temperature Sensor failure. Bypass the sensor located on Exhaust Blower, if stove now operates properly, the unit may require cleaning or a new sensor. Contact your local dealer for service.
- Check the fuse on the circuit board.

### 4. E4 on LED Display (High Limit or Lid Switch Failure)

- If unit has been running normally and you now have an E4 this could be a High Limit switch. This is a safety feature, if the hopper gets to hot the unit will shut off. The High limit switch is located the right side of the hopper near the bottom.
- If the high limit has tripped something is wrong with the unit, possibly a component failure or a hopper fire has occurred.
- Slowly open the hopper lid, if you see and smoke at all keep it closed. A fire extinguisher or water can be used to put out a fire.
- If there is no smoke the Hopper Lid switch may not be engaged or there has been a component failure. The components will need to be tested, contact an Enviro dealer. The High limit switch is a manual reset switch and a small red button on the back of the switch will need to be manually pressed in order for the unit be started again.
- To check Hopper Lid switch make sure Hopper Lid is fully closed, If you think it is properly closed, open and close the lid, you should hear an audible click form magnetic Hopper Lid switch located in control board area.
- If no click is heard check that magnet on underside of Hopper Lid is still magnetic. This is a strong magnet.
- If magnet is good, alignment is out or switch is bad.
- Test switch for audible click with another magnet, switch is right above LED Display on control board.

### 5. The Combustion Blower will not function normally.

- If the Combustion "Exhaust" Blower is not functioning properly the stove will most likely will give an E2 or E3 error code.
- Check the wiring against the wiring diagram to make sure everything is connected properly.
- The fan can be directly hooked up to power to check motor.

NOTE: DO NOT attempt any electrical troubleshooting without knowledge of electrical systems, make sure unit is not plugged in. It is recommended to call an authorized Enviro dealer or service technician.

# TROUBLESHOOTING

### 6. Auger is not Feeding Pellets.

- If this is the first time starting the unit or during the previous burn the unit ran out of pellets the Auger will need to be primed. You may get an E3 while auger is filling with pellets, just press the power button again. Once the Auger is full of pellets it will start dropping them into the burn pot.
- If Auger is primed and no pellets are dropping remove the Rear Grill to see Auger motor, you will see the auger collar and set screw rotating if the Auger is operating properly.
- If the motor's armature tries to spin but the auger shaft doesn't then the auger is jammed. Try to break apart jam by poking at the jam through the drop tube. If this fails then empty the hopper and remove the Auger Cover \*\*Remember to re-seal the cover with silicone after clearing jam\*\*
- Check the set screw locking the motor shaft to the auger shaft. This needs to be tightened to the flat on the motor shaft for proper rotation.
- Check the fuses on the main circuit board.

### 7. The Convection Blower will not function normally.

- The Convection fan should come on when the unit is started. Speed is automatically controlled, the higher the heat level the higher the convection fan voltage will be.
- · Check Wiring against wiring diagram.
- AC wall voltage can be directly hooked up to fan to test motor.
- Check that blade spins with very little friction.
- Check fuses on main circuit board.

# 8. Ignitor not working

- If pellets are feeding and the combustion blower is working your stove should light a fire or at least start smoking.
- Make sure the burn pot and burn pot liner are correctly installed square to the Ignitor and air tube.
- If stove errors out before lighting open door and carefully check to see it pellets around the Ignitor hole are warm If not remove ignitor and test, replace if it does not heat up.
- If the air damper is closed to much or Combustion Blower is not working the stove will not light.
- Check the fuses on the main circuit board.

### 9. Control settings (Heat Level) has no effect on the fire.

- If the LED beside the Power button is flashing the Control Board has complete control of the unit. This means the unit is in start-up mode, once the start-up cycle is complete the light will go solid.
- If running in Auto or "Comfort mode" and the LED light beside the Auto button is flashing the unit is in suspend mode because it has overshot the set point. Once temperature drops below the set point the stove will turn back on.

# Enviro Warranty for Enviro Pellet Products

Sherwood Industries Ltd. ("Sherwood") hereby warrants, subject to the terms and conditions herein set forth, this product against defects in material and workmanship during the specified warranty period starting from the date of original purchase at retail. In the event of a defect of material or workmanship during the specified warranty period, Sherwood reserves the right to make repairs or to assess the replacement of a defective product at Sherwood's factory. The shipping costs are to be paid by the consumer. All warranties by Sherwood are set forth herein and no claim shall be made against Sherwood on any oral warranty or representation.

#### Conditions

- A completed warranty registration must be submitted to Sherwood within 90 days of original purchase via the online warranty registration page or via the mail-in warranty registration card provided. Have the installer fill in the installation data sheet in the back of the manual for warranty and future reference.
- This warranty applies only to the original owner in the original location from date of install.
- The unit must have been properly installed by a qualified technician or installer, and must meet all local and national building code requirements.
- The warranty does not cover removal and re-installation costs.
- Sherwood Industries Ltd. reserves the right to make changes without notice.
- Sherwood Industries Ltd. and its employees or representatives will not assume any damages, either directly or indirectly caused by improper usage, operation, installation, servicing or maintenance of this appliance.
- A proof of original purchase must be provided by you or the dealer including serial number
- This warranty is void if the unit is used to burn materials for which the unit is not certified by the EPA and void if not operated according to the Owner's Manual.

#### **Exclusions**

An expanded list of exclusions is available at www.enviro.com/help/warranty.html This warranty does not cover:

- Damage as a result of improper usage or abuse.
- Damage caused from over-firing due to incorrect setup or tampering.
- Damage caused by incorrect installation.

#### To the Dealer

- Provide name, address and telephone number of purchaser and date of purchase.
- Provide date of purchase. Name of installer and dealer. Serial number of the appliance. Nature of complaint, defects or malfunction, description and part # of any parts replaced.
- Pictures or return of damaged or defective product may be required.

#### To the Distributor

Sign and verify that work and information are correct.

#### Sherwood Industries Ltd.

6782 Oldfield Road, Victoria, BC . Canada V8M 2A3 Online warranty registration: www.enviro.com/warranty/

FREE-STANDING PELLET STOVE

# **OWNER'S MANUAL**

PLEASE READ THIS ENTIRE MANUAL BEFORE INSTALLATION AND USE OF THIS PELLET-BURNING ROOM HEATER. FAILURE TO FOLLOW THESE INSTRUCTIONS COULD RESULT IN PROPERTY DAMAGE, BODILY INJURY OR EVEN DEATH.

Contact your building or fire officials about restrictions and installation inspection requirements in your area.

#### RATING LABEL LOCATION:

The rating label is located on the back of the ash pan cover.

#### **IMPORTANT SAFETY DATA:**

Please read this entire Owner's Manual before installing or operating your ENVIRO Pellet Stove. Failure to follow these instructions may result in property damage, bodily injury or even death. Contact your local building or fire official to obtain a permit and any information on installation restrictions and inspection requirements for your area.

To prevent the possibility of a fire, ensure that the appliance is properly installed by adhering to the installation instructions. An ENVIRO dealer will be happy to assist you in obtaining information with regards to your local building codes and installation restrictions.

Be sure to maintain the structural integrity of the home when passing a vent through walls, ceilings, or roofs.

The stove's exhaust system works with negative combustion chamber pressure and a slightly positive chimney pressure. It is very important to ensure that the exhaust system be sealed and airtight. The ash pan and viewing door must be locked securely for proper and safe operation of the pellet stove.

Do not burn with insufficient combustion air. A periodic check is recommended to ensure proper combustion air is admitted to the combustion chamber. Setting the proper combustion air is achieved by adjusting the slider damper located on the left side of the stove.

When installing the stove in a mobile home, it must be electrically grounded to the steel chassis of the home and bolted to the floor. Make sure that the structural integrity of the home is maintained and all construction meets local building codes.

Minor soot or creosote may accumulate when the stove is operated under incorrect conditions such as an extremely rich burn (black tipped, lazy orange flames).

If you have any questions with regard to your stove or the above-mentioned information, please feel free to contact your local dealer for further clarification and comments.

#### SAFETY WARNINGS AND RECOMMENDATIONS:

Caution: Do not connect to any air distribution duct or system.

Do not burn garbage or flammable fluids such as gasoline, naptha or engine oil. DO NOT BURN: treated wood, salt water wood, coal, charcoal, garbage, plastic, solvents, or colored papers. These material contain chlorides which will rapidly corrode and warp metal surfaces which voids warranty.

Unit hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.

Please read this entire Owner's Manual before installing or operating your ENVIRO Pellet Stove. Failure to follow these instructions may result in property damage, bodily injury or even death. Any unauthorized modification of the appliance or use of replacement parts not recommended by the manufacturer is prohibited.

**Warning:** Parts of the appliance, especially the external surfaces, will be hot to touch when in operation and due care will need to be taken. Never place wood, paper, furniture, drapes or other combustible materials within 80cm  $(31\frac{1}{2}")$  of the front of the unit, 20cm  $(7\frac{7}{8}")$  from each side, and 10cm (4") from the back of the unit. Do not let children or pets touch it when it is hot.

To prevent the possibility of a fire, ensure that the appliance is properly installed by adhering to the installation instructions. An ENVIRO dealer will be happy to assist you in obtaining information with regards to your local building codes and installation restrictions.

**FIRE EXTINGUISHER AND SMOKE DETECTION:** All homes with a pellet burning stove should have at least one fire extinguisher in a central location known to all in the household. Smoke detectors and carbon monoxide detectors should be installed and maintained in the room containing the stove. If it sounds the alarm, correct the cause but do not deactivate. You may choose to relocate the smoke detection devise within the room; DO NOT REMOVE THE SMOKE OR CARBON MONOXIDE DETECTORS FROM THE ROOM.

**CHIMNEY OR RUN AWAY FIRE:** Call local fire department (or dial 911). Close the draft fully. Examine the flue pipes, chimney, attic, and roof of the house, to see if any part has become hot enough to catch fire. If necessary, spray with fire extinguisher or water from the garden hose. IMPORTANT: Do not operate the stove again until you are certain the chimney and its lining have not been damaged.

**FUEL**: This pellet stove is designed and approved to only burn wood pellet fuel with up to 3% ash content. Dirty fuel will adversely affect the operation and performance of the unit and may void the warranty. Check with your dealer for fuel recommendations.

DO NOT use this appliance as an incinerator. DO NOT use unsuitable and non recommended fuels, including liquid fuels.

#### THE USE OF CORDWOOD IS PROHIBITED BY LAW.

**FLAMMABLE LIQUIDS: Never** use gasoline, gasoline-type lantern fuel, kerosene, charcoal lighter fluid, or similar liquids to start or "freshen up" a fire in the heater. Keep all such liquids well away from the heater while it is in use.

**SOOT:** Operation of the stove with insufficient combustion air will result in the formation of soot which will collect on the glass, the heat exchanger, the exhaust vent system, and may stain the outside of the house. This is a dangerous situation and is inefficient. Frequently check your stove and adjust the slider/damper as needed to ensure proper combustion. **See: "SLIDER/DAMPER SETTING".** 

**CLEANING:** There will be some build up of fly ash and small amounts of creosote in the exhaust. This will vary due to the ash content of the fuel used and the operation of the stove. It is advisable to inspect and clean the exhaust vent semi-annually or every two tons of pellets.

The appliance, flue gas connector and the chimney flue require regular cleaning. Check them for blockage prior to re-lighting after a prolonged shut down period.

**ASHES:** Disposed ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be on a non-combustible floor on the ground, well away from all combustible materials pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispensed, they should be retained in the closed container until all cinders have been thoroughly cooled.

**ELECTRICAL:** The use of a surge protected power bar is recommended. The unit must be grounded. The grounded electrical cord should be connected to a standard 110-120 volts, nominal average 2.0 Amps (4.1 Amps peak), 60 hertz electrical outlet and also must be accessible. Ensure the polarity to the outlet, the unit will be plugged into, is correct as incorrect polarity can affect the unit's operation. If this power cord should become damaged, a replacement power cord must be purchased from a qualified ENVIRO dealer. Be careful that the electrical cord is not trapped under the appliance and that it is clear of any hot surfaces or sharp edges. This unit's maximum power requirement is 184 watts (600 watts peak).

When installing the stove in a mobile home, it must be electrically grounded to the steel chassis of the home and bolted to the floor. Make sure that the structural integrity of the home is maintained and all construction meets local building codes.

**GLASS:** Do not abuse the glass by striking or slamming the door. Do not attempt to operate the stove with broken glass. The stove uses ceramic glass. Replacement glass must be purchased from an ENVIRO dealer. Do not attempt to open the door and clean the glass while the unit is in operation or if glass is hot. To clean the glass, use a soft cotton cloth and mild window cleaner, gas or wood stove glass cleaner, or take a damp paper towel and dip into the fly ash. This is a very mild abrasive and will not damage the glass.

**OPERATION:** The door and ash drawer cover must be kept closed securely except during ignition, refuelling and removal of residue material to prevent fume spillage and for proper and safe operation of the pellet stove. Also ensure all gaskets on the door are checked and replaced when necessary.

**IMPORTANT:** The door and ash drawer cover must be kept closed except during ignition, refueling and removal of residue material to prevent fume spillage.

**CAUTION:** When operating during adverse weather, if the unit exhibits dramatic changes in combustion stop using the unit immediately.

**KEEP ASH PAN FREE OF RAW FUEL.** DO NOT PLACE UNBURNED OR NEW PELLET FUEL IN ASH PAN. A fire in the ash pan may occur.

**INSTALLATION:** Contact your local building or fire official to obtain a permit and any information on installation restrictions and inspection requirements for your area. All local regulations, including those referring to national and European Standards need to be complied with when installing this appliance.

Be sure to maintain the structural integrity of your home when passing a vent through walls, ceilings, or roofs. It is recommended that the unit be secured into its position in order to avoid any displacement. This appliance must be installed on a floor with an adequate load bearing capacity. If an existing construction doesn't meet these prerequisite, suitable measures (e.g. load distributing plate) shall be taken to achieve it.

DO NOT INSTALL A FLUE DAMPER IN THE EXHAUST VENTING SYSTEM OF THIS UNIT. DO NOT CONNECT THIS UNIT TO A CHIMNEY FLUE SERVING ANOTHER APPLIANCE.

**FRESH AIR:** Outside Fresh Air connection is optional. Fresh Air must be connected to all units installed in Mobile and "Air Tight Homes" (R2000) or where required by local codes.

Consider all large air moving devices when installing your unit and provide room air accordingly. NOTE: Extractor fans when operating in the same room or space as the appliance, may cause problems. Limited air for combustion may result in poor performance, smoking and other side effects of poor combustion.

The stove's exhaust system works with negative combustion chamber pressure and a slightly positive chimney pressure. It is very important to ensure that the exhaust system be sealed and airtight. The ash pan and viewing door must be locked securely for proper and safe operation of the pellet stove.

Do not burn with insufficient combustion air. A periodic check is recommended to ensure proper combustion air is admitted to the combustion chamber. Setting the proper combustion air is achieved by adjusting the slider damper located on the left side of the stove.

Minor soot or creosote may accumulate when the stove is operated under incorrect conditions such as an extremely rich burn (black tipped, lazy orange flames).

If you have any questions with regards to your stove or the above-mentioned information, please feel free to contact your local dealer for further clarification and comments.

SINCE SHERWOOD INDUSTRIES LTD. HAS NO CONTROL OVER THE INSTALLATION OF YOUR STOVE, SHERWOOD INDUSTRIES LTD. GRANTS NO WARRANTY IMPLIED OR STATED FOR THE INSTALLATION OR MAINTENANCE OF YOUR STOVE. THEREFORE, SHERWOOD INDUSTRIES LTD. ASSUMES NO RESPONSIBILITY FOR ANY CONSEQUENTIAL DAMAGE(S).

#### Pellet Quality:

Pellet quality is important, please read the following:

Your enviro pellet stove has been designed to burn wood pellets only. Do not use any other type of fuel, as this will void any warranties stated in this manual.

The performance of your pellet stove is greatly affected by the type and quality of wood pellets being burned. As the heat output of various quality wood pellets differs, so will the performance and heat output of the pellet stove.

**CAUTION:** It is important to select and use only pellets that are dry and free of dirt or any impurities such as high salt content. Dirty fuel will adversely affect the operation and performance of the unit and will void the warranty. The Pellet Fuel Industries (P.F.I.) has established standards for wood pellet manufacturers. We recommend the use of pellets that meet or exceed these standards. Ask your dealer for a recommended pellet type.

#### **P.F.I. PELLET STANDARDS:**

Fines (fine particles)	.1% maximum through a 1/8" screen
Bulk Density	.40 pound per cubic foot minimum
Size	$.\frac{1}{4}$ " to $\frac{5}{16}$ " diameter $\frac{1}{2} - \frac{1}{2}$ " long maximum
Ash Content	.1% maximum (Premium grade)
	3% maximum (Standard grade)
Moisture Content	.8% maximum
Heat Content	approximately 8200 Btu per pound minimum

**ASH**: The ash content of the fuel and operation of your stove will directly determine the frequency of cleaning. The use of high ash fuels may result in the stove needing to be cleaned daily. A low ash fuel may allow longer intervals between cleaning.

**CLINKERING:** [clinkers are silica (sand) or other impurities in the fuel that will form a hard mass during the burning process]. This hard mass will block the air flow through the Burn Pot Liner and affect the performance of the stove. Any fuel, even approved types, may tend to clinker. Check the Burn-Pot Liner daily to ensure that the holes are not blocked with clinkers. If they become blocked, remove the liner (when the unit is cold) and clean/scrape the clinkers out. Clean the holes with a small pointed object if required. Refer to the section Routine Cleaning and Maintenance.

**PELLET FEED RATES:** Due to different fuel densities and sizes, pellet feed rates may vary. This may require an adjustment to the slider damper setting or to the auger feed trim setting on low.

Since Sherwood Industries Ltd. has no control over the quality of pellets that you use, we assume no liability for your choice in wood pellets.

Store pellets at least 36" (1 m) away from the pellet stove.

## EMISSIONS AND EFFICIENCIES

#### **EMISSIONS AND EFFICIENCY - MINI:**

This manual describes the installation and operation of the Enviro Mini pellet heater. This heater is U.S. ENVIRONMENTAL PROTECTION AGENCY Certified to comply with 2020 particulate emission standards. Under specific test conditions this heater has been shown to deliver heat at rates ranging from 6,881-23,892 Btu/hr.

**Efficiency:** 80.2%\* HHV (PFS TECO 21-694)

\*When using optional top vent adapter kit. (50-4116)

**WARNING:** This pellet heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this pellet heater in a manner inconsistent with operating instructions in this manual.

**WARNING:** This wood pellet has a manufacturer set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this pellet heater in a manner inconsistent with operating instructions in this manual.

## OPERATING INSTRUCTIONS

#### **CONTROL BOARD FUNCTIONS:**

- **1. AUGER LIGHT:** This green light will flash in conjunction with the auger pulse.
- **2. MODE LIGHT:** Responsible for signaling the state of the control board. When the light is flashing the stove is in an automatic start mode or the thermostat has control of the unit. When the light is solid, the Heat Level Setting can be altered.
- **3. THERMOSTAT SWITCH:** Used to set the unit's controls to one of three mode settings; manual, high/low, or auto/off.
- 4. **FEED RATE TRIM BUTTON:** Used to change the feed rate trims in ¼ second increments for all feed settings. When this button is pressed, all the light will light up on the Heat Output Indicator except for the one that shows the current setting; the default setting is the number 4 light. To adjust the setting hold the Feed Rate Trim button down and press the Heat Level up or down buttons to adjust the setting.
- 5. COMBUSTION BLOWER TRIM BUTTON: Used to change the Combustion Blower trims in 5 volt increments for all feed settings until it reaches line voltage. When this button is pressed, all the light will light up on the Heat Output Indicator except for the one that shows the current setting; the default setting is the number

Figure 1: Circuit Board Control Panel Decal.

- 2 light. To adjust the setting hold the Combustion Blower Trim button down and press the Heat Level up or down buttons to adjust the setting.
- **6. ON/OFF BUTTON:** Used to turn the unit ON and OFF.
- 7. ROOM AIR FAN ON/OFF BUTTON: Used to turn convection fan on or off.
- **8. HEAT LEVEL ADJUSTMENT BUTTONS:** When pressed, will change the heat level setting of the unit up or down.
- 9. **HEAT OUTPUT INDICATOR:** Shows the present heat output setting.

#### **AUTOMATIC SAFETY FEATURES OF YOUR PELLET STOVE:**

- A. The stove will shut off when the fire goes out and the exhaust temperature drops below 120°F (49°C).
- B. The stove has a high temperature safety switch. If the temperature on the hopper reaches 200°F (93°C), the auger will automatically stop and the stove will shut down when the exhaust temperature cools #4 light flashes. Dealer will have to reset the sensor. If this happens, call your local dealer to reset the 200°F (93°C) high limit switch. **ALSO FIND THE REASONS WHY THE UNIT OVERHEATED.**
- C) The unit is equipped with a vacuum switch to monitor the venting; if it becomes blocked the vacuum switch will turn off the auger and the #2 light on the control board will flash.

#### **OPERATING YOUR PELLET STOVE:**

**PRE-BURN INSTRUCTIONS**: The burn pot liner holes must be clear and the liner installed properly against the ignitor tube for proper operation. Check the hopper for enough pellets to start the unit.

#### DO NOT OPERATE THE UNIT WITH THE DOOR OR ASH PAN OPEN.

**Note:** The thermostat mode can be changed during normal operation.

## OPERATING INSTRUCTIONS

#### **MANUAL MODE:**

All control of circuit board function is adjusted at the circuit board.

**To START:** Press the ON / OFF button. The stove will turn on. The system light will flash. The Auger Light will flash with each pulse of the auger (the Auger Feed Rate is pre-programmed during start-up). The Heat Level Indicator will show the Heat Level that the stove will run at after start-up and can be adjusted but the change will not take affect until the start -up has finished.

Figure 2: Thermostat Switch in MANUAL position.

If this is the first time the unit has been started or the unit has run out

of fuel, the auger will need to be primed. This can be done by restarting the unit five (5) minutes into its start-up or by putting a small hand full of pellets into the burnpot.

**To OPERATE:** When a fire has been established, the System Light will turn solid (after approximately 10 - 15 minutes) and the Auger Light will continue to flash to the corresponding Heat Level setting.

The convection blower (room air blower) will turn on. The speed of this blower is controlled by the setting of the heat level output indicator. The convection blower can be turned OFF by depressing the convection blower control button. For the best efficiency the convection blower should be left on at all times.

**HIGH/LOW MODE:** (Requires a thermostat) **INITIAL START-UP**: See manual mode above.

**OPERATION**: When the thermostat calls for heat (contacts are closed) the stove settings are adjustable as per Manual Mode. When the thermostat contacts open, the HEAT LEVEL and Fans will drop down to the LOW setting until the thermostat contacts close again. \*The LOW heat setting can be adjusted for different fuel qualities (see "Operating Instructions - Control Board Functions"). The stove will come back to the previous HEAT LEVEL setting when the thermostat contacts close again.

Figure 3: Thermostat Switch in HIGH/LOW position.

**AUTO/OFF MODE:** (Requires a thermostat)

**INITIAL START-UP**: See manual mode above.

**OPERATION**: When the thermostat contacts close, the unit will light automatically. Once up to temperature, the stove operates the same as in MANUAL. When the thermostat contacts open, the stove's HEAT LEVEL and Fans will drop down to the LOW setting for 30 minutes. If the thermostat contacts close within the 30 minutes, the HEAT LEVEL will

Figure 4: Thermostat Switch in ON/OFF position.

return to the previous MANUAL setting. If the thermostat contacts remain open the stove automatically begins its shutdown routine. The ON / OFF button can be presses at any time the the stove will immediately shut down. The stove will re-light when the thermostat contacts close again.

#### TURNING YOUR PELLET STOVE OFF:

- MANUAL and HI / LOW mode: To turn the unit OFF, simply press the ON / OFF button. This will stop
  the feed of pellets. The blowers will continue to operate and cool the stove down. When cool enough,
  the stove will turn off.
- AUTO / OFF mode: To turn the unit OFF, turn the thermostat down or off. NOTE: The unit will run on low for three (3) minutes before it turns off.

DO NOT unplug unit while Combustion fan is operating. This may lead to smoke escaping from the stove.

## OPERATING INSTRUCTIONS

#### SLIDER/DAMPER SET-UP:

THE SLIDER / DAMPER HAS BEEN SET AT THE FACTORY. This is used to regulate the airflow

**through the pellet stove.** The slider damper knob is located on the left cab side (see Figure 5).

The slider damper factory setting has been set for peak efficiency operation (see Figure 6).

If the fire should happen to go out and the heat output indicator has been set on the lowest setting, the Slider Damper may need to be adjusted by a qualified technician only. Contact your local dealer.

For troubleshooting purposes the firebox vacuum pressure may need to be confirmed. This should be done only on a hot stove (operating for thirty (30) minutes or more) by placing a Magnahelic Pressure Gauge in the firebox. The reading can be taken from the  $\frac{1}{8}$ " (3 mm) hole located in the front of the firebox under the door. The factory setting should read approximately 0.06 inches of water column on the high fire setting.

Figure 5: Slider/Damper Knob.

## **SPECIAL NOTES:**

**Pellet quality** is a major factor in how the Pellet stove will operate. If the pellets have a high moisture content or ash content the fire will be less efficient and has a higher possibility of the fire building up and creating clinkers (hard silica ash build-up).

**Overfiring** should not occur if stove is operating properly, if stove looks like it is buring unusually high turn off the unit with the power button, **DO NOT** unplug. There is a built in safety switch if unit gets too hot from overfiring it will shut down automatically.

Figure 6: Efficient Flame.

#### GUIDELINES FOR FINE-TUNING FOR FUEL QUALITY:

Due to fuel quality the slider damper and control board trims may need to be fine-tuned.

- 1. If the unit has excesses ash build-up in the liner on the lower feed settings, the Combustion Blower Trim should be increased one setting at a time until the problem improves (Factory Setting is #2).
- 2. If the fire is going out on low because the airflow is too great, the Combustion Blower Trim can be lowered to the #1 setting.
- 3. If the stove has excesses ash build-up in the liner on the higher settings the Feed Rate Trim should be trimmed down a setting at a time until the problem improves (Factory setting is #4).
- 4. If you need more heat and the fuel has long pellets, the majority are over 1" (2.5cm) in length, the Feed Rate Trim can be moved up to the #5 setting. NOTE: Only do this if the fuel burns without building up.

## ROUTINE CLEANING AND MAINTENANCE

The following list of components should be inspected and maintained routinely to ensure that the appliance is operating at its' optimum and giving you excellent heat value:

2-3 Days / Weekly	Semi-annually or 2 Tons of Fuel	
Burn Pot and Liner	Exhaust Vent	
Heat Exchanger Tubes	Air Intake	
Ash Pan	Blower Mechanisms	
Door Glass	Heat Exchanger Tubes	
Inside Firebox	Behind Firebox Liners & Covers	
Ash Pan and Door Gaskets	All Hinges	
Door Latch	Post Season Clean-up	

#### **TOOLS REQUIRED TO CLEAN UNIT:**

Torx T-20 Screwdriver, <sup>5</sup>/<sub>16</sub>" wrench or socket, Brush, Soft Cloth, Vacuum with fine filter bag

# Burn Pot Liner Ignitor Hole Ignitor Tube Burn Pot

Figure 7: Mini Burn pot and Liner

#### **BURNER POT AND LINER** (2-3 days)

Every two to three days (when the unit is cold), remove the burn-pot liner from the stove. Using a metal scraper, remove material that has accumulated or is clogging the liner's holes. Then dispose of the scraped ashes from the liner and from inside the burn-pot. Place the burn-pot back into the stove, making sure that the pipes are properly inserted into the burn pot. Place the liner back into the burn-pot, making sure that the ignitor hole in the liner is aligned with the ignitor tube (shown in Figure 7). Push the liner up against the ignitor tube.

If, after long periods of burning, the fire continually builds up and overflows the burn pot or there is a build up of clinkers, this is an indication that the pellet fuel quality is poor, the stove may need cleaning, or the air adjusted. Check the stove for ash build up (clean if required) and adjust the slider / damper to produce the proper clean combustion.

#### **HEAT EXCHANGER TUBES** (2-3 days)

A handle is located in the center of the stove just above the door. This handle is to be pulled up and down a few times (ONLY WHEN THE UNIT IS COLD) in order to clean away any fly ash that may have collected on the heat exchanger tubes. As different types of pellets produce different amounts of ash, cleaning of the tubes should be done on a regular basis to enable the unit to run efficiently.

#### **ASH PAN AND DOOR GASKETS** (weekly)

After extended use the gasketing may come loose. To repair this, glue the gasketing on using high-temperature fiberglass gasket glue available from your local dealer. This is important to maintain an airtight assembly.

#### **DOOR GLASS CLEANING (2-3 days)**

Cleaning of the glass must only be done when stove is cold. Open the door by lifting the handle. The glass can be cleaned by wiping down the outside and inside of the glass with a dry soft cloth.

## ROUTINE CLEANING AND MAINTENANCE

If the glass has build up that can not be removed with only the cloth, clean the glass using paper towel and a gas appliance glass cleaner, this may be purchased through most dealers. If a gas appliance glass cleaner is not available, use a damp paper towel dipped in fly ash to clean the glass. After the glass has been cleaned use the dry soft cloth to wiping down the outside and inside of the glass.

#### **ASH PAN** (weekly)

This part is located under the door. To remove the ash pan, open the cover from the right hand side, and lift the ash pan up and out. Dump the ashes into a metal container stored away from combustibles. Monitor the ash level every week. Remember that different pellet fuels will have different ash contents. Ash content is a good indication of fuel efficiency and quality. Refer to "Safety Warnings And Recommendations" for disposal of ashes. Vacuum the inside of the ash pan compartment inside the pedestal including the hole at the top back of the compartment. Replace the ash pan and close pedestal door. **DO** NOT PLACE UNBURNED OR RAW PELLET **FUEL IN ASH PAN.** 

#### **AIR INTAKE** (semi-annually)

Inspect periodically to be sure that it is not clogged with any foreign materials.

#### **EXHAUST PASSAGES** (semi-annually)

Figure 8: Mini Open

To prevent build up of fly-ash all the exhaust passages must be cleaned and vacuumed.

#### Clean behind clean-out covers:

- Open ash box cover.
- Remove ash box.
- Using a 5/16" socket, loosen the six (6) screws in the ash box compartment; four (4) on the back and one (1) on each side (see Figure 9).
- Rotate the back cover counterclockwise to remove and rotate the side covers to open them.
- Vacuum out all three (3) chambers.
- Close all the clean-out covers and tighten the screws.

Figure 9: Mini Clean-Out Covers.

#### DECIDING WHERE TO LOCATE YOUR PELLET APPLIANCE:

- 1. Check clearances to combustibles.
- 2. Do not obtain combustion air from an attic, garage or any unventilated space. Combustion air may be obtained from a ventilated crawlspace.
- 3. Do not install the stove in a bedroom.
- 4. You can vent the stove through an exterior wall behind the unit or connect it to an existing masonry or metal wood stove chimney (must be lined if the chimney is over 6" (15 cm) diameter, or over 28 inches² (180 cm²) cross sectional area). An interior vent can be used with approved pipe passing through the ceiling and roof.
- 5. Locate the stove in a large and open room that is centrally located in the house. This will optimize heat circulation.
- 6. The power cord is 8 feet (2.43 m) long and may require a grounded extension cord to reach the nearest electrical outlet.

#### www.nficertified.org

We recommend that our pellet hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Pellet Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

#### APPLIANCE DIMENSIONS AND SPECIFICATIONS:

Figure 10: Dimensions of Mini.

#### REMOVING PELLET STOVE FROM PALLET AND INSTALLING HEARTH PAD:

Figure 12: Installing tabs into hearth pad.

#### **Tool Required:**

- T-20 screwdriver
- 5/16" socket or flat head screwdriver

#### **Installation:**

1. Slide a hearth pad tab through each of the three (3) slots on the hearth pad so the slotted end is up and secure in place with a T-20 screw through the pad into the tab (refer to Figure 11).

out to unhook the hinges at the left.

Figure 11: Screw behind ash box.

- 2. Open the ash pan cover from the right then lift the cover up and
- 3. Remove the cab sides.
  - a) Ensure the screws behind the ash box (Figure 12) and the three (3) on each side at the back (Figure 13) are loosened.
- b) Remove knob and collar from slider rod.
- c) Pull the cab sides straight out.
- 4. Using a 5/16" socket or flat head screwdriver, remove the three (3) wood screws that are holding the bottom of the stove to the pallet. There is one (1) screw behind each side panel and one (1) at the back behind the back grill (refer to Figure 14).
- 5. Loosen the three (3) T-20 screws from the base of the unit (see Figure 15).

Figure 14: Screws to take out to remove stove from pallet.

- 6. Either lift the unit up and place it into the hearth pad or carefully place the unit on its back; it can rest on the pallet it was shipped on (allow the pipes to fit through an opening in the pallet).
- 7. Align the three (3) tabs on the hearth pad to the three (3) screws on the unit,

slide together, and tighten the T-20 screws.

- 8. Adjust the leveling legs to level and support stove.
- 9. Re-install the cab sides and ash pan cover.

Figure 13: Screws at the back of the cabinet side.

Figure 15: Mini Bern Hearth Pad in Place.

#### **CLEARANCES TO COMBUSTIBLES:**

**IMPORTANT:** Attach the Mini's Hearth Pad when installing the unit on a combustible floor. The supplied hearth pad meet all the requirement of a proper hearth pad. If you do not use the supplied hearth pad a hearth pad must be used when on combustible material.

If the Mini is installed on carpet the use of a solid material must be used under leveling legs.

Figure 16: Mini Clearance to Combustibles.

These dimensions are minimum clearances but it is recommended that you ensure sufficient room for servicing, routine cleaning and maintenance.

Side wall to unit 8 inches (20 cm)
Back wall to unit 4 inches (10 cm)
Corner to unit 3 inches (7.5 cm)

#### **ALCOVE CLEARANCES:**

This unit may be installed in an alcove. Maintain these clearances to combustibles.

Minimum Alcove width 36 inches (91.5 cm)
Minimum Alcove height 48 inches (122 cm)
Maximum Alcove depth 30 inches (76 cm)

Install vent at clearances specified by the vent manufacturer.

Figure 17: Mini Minimum Alcove Size.

#### **VENT TERMINATION REQUIREMENTS:**

#### IT IS RECOMMENDED THAT YOUR PELLET STOVE BE INSTALLED BY AN AUTHORIZED DEALER/INSTALLER.

Table 1: Use in conjunction with	n Figure 18 for allowable exterior vent termination locations	

Letter	Minimum Clearance	Description
Α	24 in (61 cm)	Above grass, top of plants, wood, or any other combustible materials.
В	48 in (122 cm)	Beside/below any door or window that may be opened. (18" (46 cm) if outside fresh air installed.)
С	12 in (30 cm)	Above any door or window that may be opened. (9" (23 cm) if outside fresh air installed.)
D	24 in (61 cm)	To any adjacent building, fences and protruding parts of the structure.
E	24 in (61 cm)	Below any eave or roof overhang
F	12 in (30 cm)	To outside corner.
G	12 in (30 cm)	To inside corner, combustible wall (vertical and horizontal terminations).
Н	3 ft (91 cm) within a height of 15 ft (4.5 m) above the meter/regulator assembly	To each side of center line extended above natural gas or propane meter/ regulator assembly or mechanical vent.
I	3 ft (91 cm)	From any forced air intake of other appliance
J	12 in (30 cm)	Clearance to non-mechanical air supply inlet to building, or the combustion air inlet to any appliance.
K	24 in (61 cm)	Clearance above roof line for vertical terminations.
L	7 ft (2.13 m)	Clearance above paved sidewalk or paved driveway located on public property.

1. Do not terminate the vent in any enclosed or semi-enclosed areas such as a carport, garage, attic, crawlspace, narrow walkway, closely fenced area, under a sundeck or porch, or any location that can build up a concentration of fumes such as stairwells, covered breezeway, etc.

Figure 18: Use in conjunction with Table 1 for allowable exterior vent termination locations.

- 2. Vent surfaces can become hot enough to cause burns if touched by children. Non-combustible shielding or guards may be required.
- 3. Termination must exhaust above the inlet elevation. It is recommended that at least five feet of vertical pipe be installed outside when the appliance is vented directly through a wall, to create some natural draft to prevent the possibility of smoke or odor during appliance shut down or power failure. This will keep exhaust from causing a nuisance or hazard from exposing people or shrubs to high temperatures. In any case, the safest and preferred venting method is to extend the vent through the roof vertically.
- 4. Distance from the bottom of the termination and grade is 12" (30 cm) minimum. This is conditional upon the plants and nature of grade surface. The exhaust gases are hot enough to ignite grass, plants and shrubs located in the vicinity of termination. The grade surface must not be lawn.
- 5. If the unit is incorrectly vented or the air to fuel mixture is out of balance, a slight discoloration of the exterior of the house might occur. Since these factors are beyond the control of Sherwood Industries Ltd, we grant no quarantee against such incidents.

NOTE: Venting terminals shall not be recessed into walls or siding.

#### **OUTSIDE FRESH-AIR CONNECTION:**

Outside fresh air is mandatory when installing this unit in airtight homes and mobile homes.

A Fresh-air intake is strongly recommended for all installations. Failure to install intake air may result in improper combustion as well as the unit smoking during power failures.

When connecting to an outside fresh air source, do not use plastic or combustible pipe. A 2" minimum (51 mm) ID (inside diameter) steel, aluminum or copper pipe should be used. It is recommended, when you are installing a fresh air system, to keep the number of bends in the pipe to a minimum.

Figure 19: Outside Air Connection.

#### **EXHAUST AND INTAKE LOCATIONS:**

Figure 20: Mini Inlet and Outlet Location.

#### **EXHAUST**

Base of unit to center of flue  $10\frac{4}{}$ " (255 mm) Center of unit to center of flue 0" (0 mm) [at center of unit]

#### FRESH AIR INTAKE.

Base of unit to center of intake 6%" (162 mm) Center of unit to center of intake  $2^{1}/_{16}$ " (53 mm)

#### MOBILE HOME INSTALLATION:

- Secure the heater to the floor using the two holes in the pedestal.
- Ensure the unit is electrically grounded to the chassis of your home (permanently).
- Do not install in a room people sleep in.
- Outside fresh air is mandatory. Secure outside air connections directly to fresh air intake pipe and secure with three (3) screws evenly spaced.

CAUTION: THE STRUCTURAL INTEGRITY OF THE MANUFACTURED HOME FLOOR, WALL AND CEILING/ROOF MUST BE MAINTAINED.

Figure 21: Mobile home installation.

#### CORNER THROUGH WALL INSTALLATION:

Figure 22: Corner Installation.

#### HORIZONTAL EXHAUST THROUGH WALL INSTALLATION:

#### Vent installation: install vent at clearances specified by the vent manufacturer.

A chimney connector shall not pass through an attic or roof space, closet or similar concealed spaces, or a floor, or ceiling. Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365 Installation Code for Solid-Fuel-Burning Appliances and Equipment. Only use venting of L or PL type with an inside diameter of 3 or 4 inches (7.6 or 10.1 cm).

- Choose a location for your stove that meets the requirements stated in this manual and allows installation with the least amount of interference to house framing, plumbing, wiring, etc.
- 2. Install a non-combustible hearth pad (where necessary).
- 3. Place the appliance 15" (37.5 cm) away from the wall. If the stove is to be set on a hearth pad, set the unit on it, and adjust the leveling legs.
- 4. Locate the center of the exhaust pipe on the stove. Extend that line to the wall. Once you have located the center point on the wall, refer to pellet vent manufacturer installation instructions for correct hole size and clearance to combustibles.
- 5. Install the wall thimble as per the instructions written on the thimble.
  - Maintain an effective vapour barrier in accordance with local building codes.
- 6. Install a length of 3" (75 mm) or 4" (100 mm) vent pipe into the wall thimble. The pipe should install easily into the thimble.
- 7. Connect the exhaust vent pipe to the exhaust pipe on the stove. Seal the connection with high temperature silicone.
- 8. Push the stove straight back, leaving a minimum of 4" (10 cm) clearance from the back of the stove to the wall. Seal the vent pipe to the thimble with high temperature silicone.

Figure 23: Straight through wall Installation.

Figure 24: Venting to use with straight through wall Installation.

- 9. The pipe must extend at least 12" (30 cm) away from the building. If necessary, bring another length of pipe (PL type) to the outside of the home to connect to the first section. Do not forget to place high temperature silicone around the pipe that passes through the thimble.
- 10. Install a vertical pipe, or if all requirements for direct venting are met, install vent termination. The stainless steel cap termination manufactured by the vent manufacturer is recommended. However, when the vent terminates several feet above ground level and there are no trees, plants, etc. within several feet, a 45° elbow can be used as termination. The elbow must be turned down to prevent rain from entering.

#### **NOTE:**

- It is recommended that horizontal through wall installations have 3 to 5 feet (91 to 152 cm) of vertical pipe in the system to help naturally draft the unit in the event of extreme weather or a power outage.
- Some horizontal through wall installations may require a "T" and 3 to 5 feet (91 to 152 cm) of vertical pipe outside the building to help draft the unit. This may be required if a proper burn cannot be maintained, after the stove has been tested and the airflow set. This is due to the back pressure in the exhaust caused by airflow around the structure.
- Follow vent manufacturer guidelines for installation of venting. High temp Sealent must be used when connecting vent pipe to the unit's starter pipe. Improper seals at the vent joints may cause combustion by-products to leak into the room where installed **seal as required.**

#### THROUGH WALL WITH VERTICAL RISE AND HORIZONTAL TERMINATION INSTALLATION - FREESTANDING:

A 45° elbow may be used in place of the termination cap (or stainless steel termination hood).

Figure 25 is the recommended installation set up.

Figure 26 is the installation to use if there is a concrete or retaining wall in line with exhaust vent on a pellet stove. The termination must be 12" (30 cm) from the outside wall and 12" (30 cm) above the ground.

Figure 25: Venting horizontally with rise.

Figure 26: Venting with concrete wall behind unit .

#### INSIDE VERTICAL INSTALLATIONS:

Figure 27: Inside Vertical Installation.

- 1. Choose a stove location that is ideal. See the section "Deciding Where to Locate your Pellet Appliance."
- 2. Place a non-combustible hearth pad where necessary.
- 3. Place the unit on the hearth pad (if installed on a combustible surface) and space the unit in a manner so when the pellet vent is installed vertically, it will be 3" (7.5 cm) away from a combustible wall.
- 4. Install the tee with clean out.
- 5. Install the pellet vent upward from there. When you reach the ceiling, make sure that the vent goes through the ceiling fire stop. Maintain a 3" (7.5 cm) distance to combustibles and keep attic insulation away from the vent pipe. Maintain an effective vapor barrier.
- 6. Finally, extend the pellet vent to go through the roof flashing.
- 7. Ensure that the rain cap is approximately 24" (600 mm) above the roof.

#### **O**UTSIDE **V**ERTICAL **I**NSTALLATIONS:

To accomplish a outside vertical pipe installation, follow steps 1 through 5 in the "Inside Vertical Installations - Freestanding" section and then finish it by performing the following (refer to Figure 16).

- 1. Install a tee with clean out on the outside of the house.
- 2. Install PL vent upward from the tee. Make sure that you install support brackets to keep the vent straight and secure.
- 3. Install ceiling thimble and secure the flashing as you go through the roof.
- 4. Ensure that the rain cap is approximately 24" (600 mm) above the roof.

Figure 28: Outside Vertical Installation.

#### **HEARTH MOUNT INSTALLATION:**

Figure 29: Freestanding hearth mount installation.

Refer to Figures 29 and 30.

- 1. Install the hearth pad.
- 2. Lock the fireplace damper in the open position.
- 3. Install a positive flue connector at the fireplace dampers or seal the chimney at the top.
- 4. Connect a tee to the exhaust pipe.
- 5. Install flexible stainless steel liner or listed pellet vent to the top of the chimney.

Figure 30: Freestanding hearth mount installation overview.

#### TOP VENT ADAPTER KIT

#### THERMOSTAT INSTALLATION:

- 1. Install the wall thermostat in a location that is not to close too the unit but will effectively heat the desired area.
- 2. Install a 12 or 24 Volt Thermostat using an 18 x 2 gauge wire from the unit to the thermostat.

Figure 37: Thermostat wire placement.

If the unit has been placed in the HI / LOW mode, the unit will be taken to a low or idle setting when the thermostat is not calling for heat. When the thermostat calls for heat, the unit will go to the setting that is displayed on the control board Heat Indicator.

### TROUBLESHOOTING

#### DO NOT:

- Service the stove with wet hands. The stove is an electrical appliance, which may pose a shock hazard if handled improperly. Only qualified technicians should deal with possible internal electrical failures.
- Do not remove from the firebox any screws without penetrating oil lubrication.

#### WHAT TO DO IF:

- 1. The stove will not start.
- 2. The stove will not operate when hot.
- 3. The exhaust blower will not function normally.
- 4. Light # 2 on Heat output bar flashing.
- 5. Auger light flashes but auger motor does not turn at all
- 6. Light # 4 on Heat output bar flashing.
- 7. The convection blower will not function normally.
- 8. Igniter- the pellets will not light.
- 9. Control settings (Heat Level) has no effect on the fire.
- 10. The stove keeps going out.

# \*NOTE: All troubleshooting procedures should be carried out by qualified technicians or installers.

#### 1. The stove will not start.

- ✓ Make sure the stove is plugged in and the wall outlet is supplying power..
- ✓ If the Control Board has been placed in the ON /OFF thermostat mode, then turn the thermostat up to call for heat.
- ✓ Check the Heat Level Indicator. If the # 2 light is flashing (see the # 2 light is flashing)
- ✓ Check the fuse on the circuit board.
- ✓ If the unit still does not start, contact your local service dealer for service.

#### 2. The stove will not operate when hot.

- ✓ Check the Heat Level Indicator if a fire is not detected, or if the fire has gone out **the #3 light will flash** because the Exhaust Temperature Sensor's contacts have opened.
- ✓ Check the hopper for fuel.
- ✓Incorrect air damper setting. Excessive air may consume the fire too quickly before the next drop of fuel, leaving completely unburned fuel in the burn pot liner. Insufficient air will cause build up, further restricting the air flow through the Burn Pot Liner. This in turn will cause the fuel to burn cold and very slowly. Fuel may build up and smother the fire. In this case clean the burn pot. (NOTE: unit may require a change to the vent system or installation of fresh air to correct Air to Fuel ratio problems).
- ✓ Combustion Blower failure. The Combustion Blower is not turning fast enough to generate the proper vacuum in the fire box. Visual Check is the blower motor turning.
- ✓ Check the Exhaust Blower voltage across the blower wires (>=114V on #5 setting and >= 82V on #1 setting). Replace the Circuit Board if the Voltage reading is less than 82 V. with a line voltage >114 V AC.
- ✓ Check Vacuum levels in the exhaust channel by bypassing the Vacuum Switch, then remove the Vacuum hose from Vacuum Switch. Check exhaust vacuum readings by placing the open end of the Vacuum Hose on a Magnahelic Gauge (readings must be above .10" W.C. on low fire).

If the motor fails to reach a 0.10" W.C. readings, then replace the Combustion Blower.

## TROUBLESHOOTING

- ✓Poor Quality Fuel Insufficient energy in the fuel to produce enough heat to keep the stove burning or operational.
- ✓ Exhaust Temperature Sensor failure. Bypass sensor located on Exhaust Blower if stove now operates properly, the unit may require cleaning or a new sensor. Contact your local dealer for service.
- ✓ Check the fuse on the circuit board.

#### 3. The exhaust motor will not function normally.

- ✓Open the left side access panel; check all connections against the wiring diagram.
- ✓ See "2. The stove will not operate when hot," section.

#### 4. Light # 2 on Heat output bar flashing.

(The Vacuum Switch contacts have opened for more than 15 sec.)

- ✓ Pinch, break or blockage in Vacuum Hose Check hose for pinch points or damage, replace or re-route as required. Blow out Vacuum Hose
- ✓ Blocked Hose Barb on Exhaust Channel Use a paper clip to clean out Hose Barb or remove the Vacuum Hose from the Vacuum Switch and blow into the hose to remove blockage.
- ✓ Blocked exhaust / venting system Have stove and venting cleaned and inspected.
- ✓ Severe negative pressure in area where unit is installed Check the operation by opening a window, does this solve the problem? If it does, install fresh air intake to unit or room. Venting system may require vertical section to move termination into a low pressure zone.
- ✓ Vacuum Switch failure Bypass the vacuum switch, if this corrects the problem check for above problems before replacing the Vacuum Switch.
- ✓ Damage to gray wires between Circuit Board and Vacuum Switch Inspect wires and connectors
- ✓ Combustion Blower failure The Combustion Blower is not turning fast enough to generate the proper vacuum in the Exhaust Channel. Visual Check; is the blower motor turning? Check the Exhaust Blower voltage across the blower wires (>=114V on #5 setting and >= 82V on #1 setting). − Replace the Circuit Board if the Voltage reading is less than 82 V. with a line voltage >114 V AC.
- ✓ Check Vacuum levels in the exhaust channel by bypassing the vacuum switch, then remove the Vacuum hose from Vacuum Switch. Check exhaust vacuum readings by placing the open end of the Vacuum Hose on a Magnahelic Gauge. (readings must be above .10″ W.C. on low fire).

If the motor fails to reach a 0.10" W.C. readings, then replace the Combustion Blower

#### To reset Circuit Board after a trouble code - push the ON/OFF button

#### 5. Auger light flashes but auger motor does not turn at all.

- ✓ If the Auger gear box does not turn but the motor's armature does try to spin then the auger is jammed. Try to break apart jam by poking at the jam through the drop tube. If this fails then empty the hopper and remove the Auger Cover \*\*Remember to re-seal the cover after installation\*\*
- ✓ Check the fuse on the circuit board.

#### 6. Light # 4 on Heat output bar flashing.

✓ Reset high limit sensor and determine cause – was it Convection Blower failure?

## TROUBLESHOOTING

#### 7. The convection blower will not function normally.

- ✓ Clean all grill openings at the back and below unit .
- ✓ Press the fan button; does the fan come on? Press again to verify that the blower turns on; if, not contact your local dealer for service.

#### 8. Ignitor- the pellets will not light.

- ✓ Everything else in the stove operates but the ignitor will not light the pellets.
- ✓ Make sure the burn pot liner is up tight and square to the ignitor tube by pushing the burn pot back against the ignitor tube.
- ✓ Check to see if the exhaust blower is operating. If not, contact your local dealer for service.
- ✓ Check the fuse on the circuit board.

**NOTE:** The ignitor should be bright orange in color. If not replace the ignitor.

#### 9. Control settings (Heat Level) has no effect on the fire.

- ✓ NOTE: If the system light is flashing the Control Board has complete control of the unit. When the units system light becomes solid then control of the unit is given back to the operator.
- ✓ If there is no control of the Heat Level button make sure the thermostat is calling for heat.
- ✓ Call your local dealer for service.

#### 10. The stove keeps going out.

If the stove goes out and leaves fresh unburned pellets or cigarette-like ashes in the burn pot liner, the fire is going out before the stove shuts off.

- ✓ Check to see that the Slider / Damper is in the correct position (set with a magnehelic gauge).
- ✓Turn the Heat Level up slightly (poor quality pellets will require slightly higher settings).

If the stove goes out and there are partially burned pellets left in the burn pot liner, the stove has shut down due to a lack of air, exhaust temperature, or power failure.

- ✓ Adjust the Slider / Damper.
- ✓ Adjust the trim settings
- ✓ Check to see if the stove needs a more complete cleaning.
- √Turn the Heat Level up slightly (poor quality pellets will require slightly higher settings).
- ✓ Did the power go out?
- ✓ Contact your local Dealer for service.

## WIRING DIAGRAM

# PARTS LIST

Reference Number	Description	Part Number
1	120°F (49°C) Ceramic Fan Temperature Sensor	EC-001
2	Auger Motor - 115V	EF-001
3	High Limit Temp Sensor 200°F (93°C) Manual Reset	EF-016
4	Vacuum Switch - 115V	EF-017
	Silicone Hose	EF-018
	Aluminum Hose Barb	EF-019

# PARTS DIAGRAM - COMPONENTS

# Enviro Warranty for Enviro Pellet Products

Sherwood Industries Ltd. ("Sherwood") hereby warrants, subject to the terms and conditions herein set forth, this product against defects in material and workmanship during the specified warranty period starting from the date of original purchase at retail. In the event of a defect of material or workmanship during the specified warranty period, Sherwood reserves the right to make repairs or to assess the replacement of a defective product at Sherwood's factory. The shipping costs are to be paid by the consumer. All warranties by Sherwood are set forth herein and no claim shall be made against Sherwood on any oral warranty or representation.

### Conditions

- A completed warranty registration must be submitted to Sherwood within 90 days of original purchase via the online warranty registration page or via the mail-in warranty registration card provided. Have the installer fill in the installation data sheet in the back of the manual for warranty and future reference.
- This warranty applies only to the original owner in the original location from date of install.
- The unit must have been properly installed by a qualified technician or installer, and must meet all local and national building code requirements.
- The warranty does not cover removal and re-installation costs.
- Sherwood Industries Ltd. reserves the right to make changes without notice.
- Sherwood Industries Ltd. and its employees or representatives will not assume any damages, either directly or indirectly caused by improper usage, operation, installation, servicing or maintenance of this appliance.
- A proof of original purchase must be provided by you or the dealer including serial number
- This warranty is void if the unit is used to burn materials for which the unit is not certified by the EPA and void if not operated according to the Owner's Manual.

#### **Exclusions**

An expanded list of exclusions is available at www.enviro.com/help/warranty.html This warranty does not cover:

- Damage as a result of improper usage or abuse.
- Damage caused from over-firing due to incorrect setup or tampering.
- Damage caused by incorrect installation.

#### To the Dealer

- Provide name, address and telephone number of purchaser and date of purchase.
- Provide date of purchase. Name of installer and dealer. Serial number of the appliance. Nature of complaint, defects or malfunction, description and part # of any parts replaced.
- Pictures or return of damaged or defective product may be required.

#### To the Distributor

Sign and verify that work and information are correct.

#### Sherwood Industries Ltd.

6782 Oldfield Road, Victoria, BC . Canada V8M 2A3 Online warranty registration: www.enviro.com/warranty/

All instruments used in the performance of the shown calibration have traceability to the National Institute of Standards and Technology (NIST). The uncertainty ratio between the calibration standards (DM.STD.) used and the unit under test (UUT) is a minimum of 4:1, unless otherwise noted. Calibration has been performed per the shown procedure number, in accordance with ISO 10012:2003, ISO 17025:2005, ANSI/NCSL-Z-540.3, and/or MIL-STD-45662A. Test methods: API2530-92 & ASME MFC-3M-1989.

This instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual and is traceable to either the SI or to National Institute of Standards and Technology (NIST). The quality system and this certificate are in compliance with ANSI/NCSL Z540-1-1994, ISO/IEC 17025-2017, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless stated in the comments, certificates reflect the "Simple Acceptance Rule" as specified by JCGM 106:2012. Unless otherwise stated, a test accuracy ratio (TAR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without written approval of JJ Calibrations.

THIS CERTIFICATE SHALL NOT BE REPRODUCED WITHOUT THE APPROVAL OF QUALITY CONTROL SERVICES, INC

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation and readability of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy. Calibrations comply with ISO/IEC 17025 and ANSI/Z540-1-1994 quality standards.

### Model 1430 Microtector® Electronic Point Gage

### Installation and Operating Instructions

Model 1430 Microtector® Portable Electronic Point Gage combines modern, solid-state integrated circuit electronics with a time-proven point gage manometer to provide fast, accurate pressure measurements.

#### SPECIFICATIONS AND FEATURES.

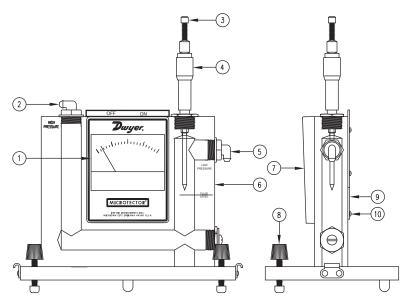

- Accurate and repeatable to ± .00025 inches water column
- Pressure range: 0 2" w.c., positive, negative, or differential pressures
- Non-toxic and inexpensive gage fluid consists of distilled water mixed with a small amount of fluorescein green color concentrate
- Convenient, portable, lightweight and self-contained, the unit requires no external power connections and is operated by a 1.5 volt penlight cell
- A.C. detector current eliminates point plating, fouling and erosion
- Micrometers are manufactured in accordance with ASME B89.1.13-2001, and are traceable to a standard at the National Institute of Standards and Technology

- Three-point mounting, dual leveling adjustment, and circular level vial assure rapid setup
- Durablock® precision-machined acrylic plastic gage body
- Sensitive 0 50 microamp D.C. meter acts as a detector and also indicates battery and probe condition
- Heavy 2<sup>-</sup> thick steel base plate provides steady mounting
- Top-quality glass epoxy circuit board and solid-state, integrated circuit electronics
- Electronic enclosure of tough, molded styrene acrylonitrile provides maximum protection to components yet allows easy access to battery compartment
- Rugged sheet steel cover and carrying case protects the entire unit when not in use
- Accessories included are (2) 3-foot lengths Tygon® tubing, (2) 1/8° pipe thread adapters and 3/4 oz. bottle of fluorescein green color concentrate with wetting agent

Maximum pressure: 100 psig with optional pipe thread connections.

Tygon® is a registered trademark of Saint-Gobain Corporation

Microtector® Gage

#### Precision Pressure Measurement

The Microtector® Gage combines the time-proven principles of the Hook Gage type manometer and modern solid-state integrated circuit electronics. It provides an inexpensive means of achieving accuracy and repeatability within  $\pm$  .00025 inches water column throughout its 0 to 2 inches w.c. range. It is truly a new standard in precision measuring devices.

### **Principles of Operation**

A pressure to be measured is applied to the manometer fluid which is displaced in each leg of the manometer by an amount equal to 1/2 the applied pressure. A micrometer mounted point is then lowered until it contacts the manometer gage fluid. The instant of contact is detected by completion of a low-power A.C. circuit. Current for this circuit is supplied by a 1.5 volt penlight cell feeding two semiconductor amplifiers which act as a free-running multivibrator operating at a frequency of approximately two kilohertz. Completion of the A.C. circuit activates a bridge rectifier which provides the signal for indication on a sensitive (0 to 50 microamps) D.C. microammeter.

On indication of contact, the operator stops lowering the point and reads the micrometer which indicates one half the applied pressure. By interpolating eight divisions (each being .000125° w.c.) between .001 micrometer graduations, a total accuracy of .00025 can easily be achieved. The micrometer complies with Federal Specification GGG-C-105A and is traceable to a master at the NIST.

### **Locating and Opening**

Stand the Microtector® Gage and case on a firm flat level surface. Remove cover by releasing the latches and lifting it straight up. If it is necessary to move the gage without case, handle only the base plate or clear acrylic block. (CAUTION: Do not handle gage by grasping meter-electronic package housing Item 7 on drawing.)

### Fluid Level

Level the gage by adjusting the two front leveling screws (Item 8 on drawing) until the bubble in the spirit level is centered in the small circle. After leveling the gage, open both rapid shut-off valve tube connectors (Items 2 and 5). Back off the micrometer (Item 4), if necessary, to make sure that the point is not immersed in the gage fluid. The fluid level in the gage should now coincide with the mark on the right hand bore (Item 6) plus or minus approximately 1/32 inch. If the level of fluid is too high, fluid can be removed with an eye dropper pipette or carefully poured out of the right connection (Item 5).

If the level is too low, remove the top left rapid shut-off valve tube connector (Item 2) and add distilled water pre-mixed with the proper amount of green concentrate. (See maintenance instructions for proportions. After correcting the fluid level, re-install the rapid shut-off connectors and, with these in the open position, re-level the Microtector® Gage. The gage is now ready to be zeroed.

### Zeroing

Turn the Micrometer barrel (Item 4) until its lower end just coincides with the zero mark on the scale and the zero on the barrel scale coincides with the vertical line on the internal scale. Note that the internal scale is graduated every .025 from 0 to 1.00 inch and the barrel scale is graduated in one thousandths from 0 to .025. Turn the meter circuit switch at the top of gage to the "on" position. While holding the barrel at the zero position (and with gage level), raise or lower the point by turning the knurled knob (Item 3) until the point is above, but near, the fluid.

Check to be sure that the meter registers zero. Watch the meter, hold the barrel, and lower the point slowly by turning the top knurled knob. As the knob is turned, the point will contact the fluid and the meter pointer will move from zero to some upscale position.

After making contact, turn the point out of the fluid by turning the micrometer barrel counterclockwise to a reading of .010 or more. Again, watch the meter and, this time, lower the point by turning the micrometer barrel. The point position where the meter pointer begins to move up scale is the zero position. This position should correspond to the zero reading on the micrometer. Adjust the point in relation to the micrometer barrel by turning the top knob while holding the barrel steady. Repeat lowering the point, watching the meter for contact, and adjusting the point until the zero position and zero reading exactly coincide. The gage is now zeroed and should not be moved.

An alternative method of zeroing and reading can be used wherein, instead of zeroing the gage completely, a zero correction reading is taken and recorded, then subtracted from the final reading. Comparable results can be obtained with either method.

### Positive Pressure Measurement

With the fluid at its proper level, a pressure of 2.0° water column maximum can be measured. Positive pressure should be applied to the top left connection (Item 2) with the micrometer zeroed as described above. This will permit a simple direct reading to be taken.

After an unknown pressure has been applied at the top left connection, the fluid level will drop in the left bore and rise over the point in the right bore. Note that the indicating meter point has moved upscale because the point is immersed in the fluid. Turn the micrometer counter-clockwise until the point leaves the fluid as indicated by the meter pointer dropping to zero on its scale. Then slowly turn the micrometer down until its point just touches the fluid surface, causing movement of the meter pointer. Withdraw the point and repeat several times, noting each time the micrometer reading where the meter pointer begins. The average of these readings multiplied by two is the pressure applied to the gage. (Avg. reading x = 2 = pressure applied in inches w.c. The degree of uncertainty for the operator is indicated by the difference in these readings.

When the readings are complete, the pressure should be removed and the zero setting of Microtector® Gage rechecked. Any change in the zero position will indicate inaccurate readings. Should this happen, the zero-set and pressure measurement procedure should be repeated.

### Negative Pressure or Vacuum Measurement

Zero the gage. Connect the source of vacuum or negative pressure to the right-side gage connection (Item 5) and proceed as described under Positive Pressure Measurement section. Remember that the pressure measured in this way is negative.

### Differential Pressure Measurement

Differential pressures may be measured by connecting the higher (more positive) pressure to the left connection (Item 2) and the lower pressure to the right connection (Item 5).

### Storage

Turn meter circuit switch to "off" position and withdraw the point well clear of fluid (by turning micrometer clockwise) when gage is not in use. This will conserve the batteries and minimize build-up of oxides, etc., on the point. Keep the unit covered and in an area free of strong solvent fumes.

#### Maintenance

When the meter reading becomes reduced or the pointer movement gets sluggish (with the circuit on and the point in fluid), the following should be done:

(1) Remove the point (by unscrewing) and clean the tip lightly using fine crocus cloth. Wipe off all grit and dirt with a clean rag; reassemble and recheck meter operation.

(2) If the meter operation continues to be sluggish, replace the size AA, 1.5 volt battery. (Replace the battery at least once a year to avoid deterioration of battery and damage to gage. Leakproof alkaline battery is recommended.)

To replace the battery, remove center screw (Item 10) located in the back of the electronic enclosure. Cover (Item 9) will come off, exposing the battery. Pull the old battery out and push a new battery into the battery holder with the positive (center) terminal to the right (to the end marked with + on the holder).

If the fluid becomes contaminated and requires replacement: empty old fluid from gage; flush out with clear water and replace with distilled water and A-126 fluorescein green color concentrate mixed with 3/4 oz. concentrate to each quart of water.

#### CAUTION:

1. Do not substitute other gage fluids, as proper gage operation depends on use of the specified gage fluid to provide proper surface tension, wetting ability and electrolyte capability with unity specific gravity.

If the gage bore is very dirty, a mild soap solution may be used to aid in cleaning prior to flushing with clear water.

2. Do not clean with liquid soaps, special solvent, de-greasers, aromatic hydrocarbons, etc. Such cleaners and solvents may contain chlorine, fluorine, acetone and related compounds that will permanently damage the gage and prevent proper operation.
