

The environmentally friendly control system that consumes less gas and maximizes efficiency.

FAN SPEED CONTROL

6 fan speeds allow room air to flow around the fireplace and to heat your home more efficiently.

FIREBOX LIGHT

Turn ON/OFF as desired to highlight the fireplace for added ambiance.

SPLIT FLOW CONTROL

Accentuate your living space without sacrificing comfort. This feature turns off the back burner and lowers the BTU output.

Available on the G42, G50

EMBER LIGHTS

Choose from 6 levels of brightness to further accent your fireplace.

FLAME SETTINGS

Adjust the height/heat of the flame with 6 pre-set levels to choose in Manual mode.

CHOICE OF PILOT MODES

BLUIQ TECHNOLOGY
Perfect for mild weather and summer. Pilot consumes less gas for maximum efficiency.

CONTINUOUS PILOT
Ideal for fall/winter and in cold climates. Keeps the venting warm to maintain a steady draft and reduces condensation on the glass during startup.

MULTI-FUNCTION WIRELESS REMOTE CONTROL

MANUAL SETTING

The flame height and fan stay where you set them until manually turned OFF.

THERMOSTAT SETTING

Fireplace automatically turns ON or OFF to maintain your set home/room temperature.

SMART THERMOSTAT SETTING

A more intelligent way to heat, this setting automatically adjusts the flame height (Up, Down, or OFF) to better maintain your set temperature.

EMBER AND FIREBOX LIGHTS

The Firebox Light is located on top of your firebox at a pre-set level, while the adjustable Ember Lights shine from the bottom. One or both may be used, with the fire ON/OFF, at night or as added ambient light for the room with 6 levels of brightness.

These lights can highlight your fireplace all year round.
